OUR MISSION, VISION, COMMITMENT, CORE VALUES & STRATEGIC GOALS

MISSION
Metro Technology Centers prepares people for successful employment and life in a global society.

Our Vision
Metro Technology Centers will be recognized as a critical partner in economic development by preparing a high-quality workforce.

Our Commitment
To be the very best we can be at serving our students and stakeholders and to find joy in doing so!

Our Core Values
Customer-focused
Learning-centered
Accountable and ethical
Innovative
Nurturing, sensitive and supportive
Dedicated to continuous quality improvement
Willing to do “whatever it takes”

Strategic Goals
Improve processes and student educational performance
Improve student and stakeholder engagement and satisfaction
Improve faculty and staff engagement and capabilities
Strengthen leadership and governance accountability
Maintain strong and stable financial and market position
HIGH SCHOOL STUDENTS

High school juniors and seniors from the following schools may attend Metro Tech tuition FREE:
- Oklahoma City Public Schools
- Crooked Oak Public Schools
- Private
- Home-schooled
- Alternative
- Charter

**Students must have maintained 85% attendance** from the previous semester and must have completed core requirements for 9th or 10th grade before enrolling at Metro Tech.

**Free bus transportation** is provided to and from participating high schools. High school students attend either morning or afternoon sessions.

**Tuition waivers** may be available for students who continue their education at Metro Tech after high school graduation. Students earn high school credits for completing a full-time career major. College credit is also available for most career majors.

**Reciprocity agreements** allow students outside of Metro Tech’s district to attend when a career major is not available at their local technology center.

**STEPS TO ENROLL-HIGH SCHOOL STUDENTS**

**IN-DISTRICT STUDENTS**

Step 1 Attend presentation at your high school
Step 2 Complete career preference survey
Step 3 Complete high school application
Step 4 Return all forms to the Metro Tech recruiter at your high school
Step 5 Visit with a Metro Tech staff member to complete enrollment process

**IN-DISTRICT HOME SCHOOLED AND PRIVATE SCHOOLED STUDENTS, OUT-OF-DISTRICT STUDENTS**

Step 1 Visit Enrollment Services Monday-Friday, 7:30am - 4:30pm.
Step 2 Complete career preference survey.
Step 3 Complete high school application.
Step 4 Home schooled students need to bring a completed and notarized affidavit to the:
- Enrollment, Recruitment and Transition Services
- Business Conference Center
- Springlake Campus
- 1900 Springlake Drive
Step 5 Turn in all forms to the career advisor.
Step 6 Student will be assigned a recruiter who will assist in completing the enrollment process.
ENROLLMENT CAREER MAJORS

CALL 405-595-4678 or visit: www.metrotech.edu

ADULT STUDENTS
Adults may attend on a full-time or half-time basis. A 600-hour career major takes approximately five months to complete on a full-time basis. Most career majors are self-paced and may require more or less time to complete. College credit is available for most career majors with the $8/college hour transcripting fee included in the tuition cost. Books, supplies and related fees may cost extra.

STEPS TO ENROLL – ADULTS
Step 1 Complete the application and assessment testing at the Enrollment Center. A photo ID is required.
Step 2 Meet with a career tech advisor.
Step 3 Make payment or arrange for financial aid. A $35 non-refundable deposit is required.
Step 4 Meet with a site counselor. Additional documentation may be required.

Enrollment Center
Springlake Campus
Business Conference Center
1900 Springlake Drive
Oklahoma City, OK
M-F 7:30 a.m. – 4:30 p.m.

Services available:
Career major enrollment
Short-term enrollment
Assessment testing
Financial aid
Job placement services

For extended hours during peak enrollment, refer to the Metro Tech website:
www.metrotech.edu/majors/howtoenroll.html

Students interested in Aviation Maintenance Technology or any adult health major must attend a scheduled orientation session to begin their application process. For more information call 595-4678.

Payments are to be made to the Office of the Bursar in the Business Conference Center, 1900 Springlake Drive, Oklahoma City, OK 73111. Purchase orders may be sent to bursar@metrotech.edu or FAX to 405-595-7809.

FINANCIAL AID
Financial aid in the form of scholarships, grants, veteran’s benefits, loans and tuition waiver programs are available for qualified persons enrolled in full-time career majors. Students may apply for the Federal Pell Grant and Stafford Loan Programs online by completing the Free Application for Federal Student Aid (FAFSA) at www.fafsa.ed.gov. For more information, call 595-4446 or 595-4436.

GENERAL INFORMATION
Course times may vary by campus.
The following is a guideline:
Morning session: 7:40-10:30 a.m.
Afternoon session: 11:25 a.m.-2:15 p.m.
Lunch: 10:30-11:25 a.m.
Evening session: varies by major (adult only)

COLLEGE CREDIT
Metro Tech students may earn from 3 to 44 hours of college credit through cooperative agreements with the Oklahoma State Regents for Higher Education, Oklahoma Department of Career and Technology Education and area two-year colleges. Visit www.metrotech.edu or call 595-2241 to see how much college credit is available for specific majors.

Credit is available through:
OCCC Oklahoma City Community College
OSU-OKC Oklahoma State University - Oklahoma City
OSU-IT OSU Institute of Technology (Okmulgee)
RSC Rose State College

STUDENTS WITH DISABILITIES
Metro Tech provides reasonable accommodations and support for students with disabilities covered by the Americans with Disabilities Act (ADA), Section 504 of the Rehabilitation Act of 1973 and Individuals with Disabilities Education Act (IDEA). If you have concerns or need an accommodation, please call Denise North, 405.595.4418, or email denise.north@metrotech.edu.

ACCREDITATION
Metro Technology Centers is accredited by:
Oklahoma Board of Career and Technology Education (OBCTE)
Oklahoma State Board of Education (OSBE)
FULL-TIME STUDENTS’ PAYMENT SCHEDULE FOR TUITION, BOOKS AND SUPPLIES

Metro Tech students are responsible for ensuring that all fees for tuition, books and supplies are paid on time. Payments are to be made in person or by mail to the office of the Bursar in the Business Conference Center, 1900 Springlake Drive, Oklahoma City, OK 73111. Fees for tuition, books and supplies for full-time students are due and payable on the first day of class.

Students may make arrangements with the Bursar to establish a payment plan according to the following schedule:

<table>
<thead>
<tr>
<th>For career majors:</th>
<th>Fees for tuition, books and supplies will be collected:</th>
</tr>
</thead>
<tbody>
<tr>
<td>Up to 1,650 hours</td>
<td>In two installments equal to one-half of the total cost of the tuition, books and supplies</td>
</tr>
<tr>
<td></td>
<td>• First installment due within first 30 days of career major</td>
</tr>
<tr>
<td></td>
<td>• Second installment due at beginning of the second half of the career major</td>
</tr>
<tr>
<td>1,651 hours and up (AMT, Radiologic Technologist)</td>
<td>In four installments equal to one-fourth of the total cost of the tuition, books and supplies</td>
</tr>
<tr>
<td></td>
<td>• First installment due within first 30 days of career major</td>
</tr>
<tr>
<td></td>
<td>• Second through fourth installments due at beginning of each of those quarters of the career major</td>
</tr>
</tbody>
</table>

A $20 monthly penalty will be assessed on the unpaid balance of an installment.

A full-time student who does not pay fees for tuition, books, and supplies according to the schedule above will not be allowed to attend classes until all fees are paid or arrangements to establish a payment plan have been made through the Bursar.

Students who must repeat a course due to low scores will be required to pay additional tuition for the course that must be repeated. Financial aid and/or agency-sponsored students are exempt from tuition penalties. Tuition collection for these students will follow Federal regulations and/or the sponsoring agency’s policy.
FULL-TIME STUDENTS’ TUITION REFUND POLICY

Full-time students who desire to withdraw from or drop a course or career major will request a tuition refund in writing and provide proof of withdrawal to the Bursar in the Business Conference Center, 1900 Springlake Drive, Oklahoma City, OK 73111. Non-attendance does not constitute withdrawal from a course/career major.

Full-time students will be entitled to the following refunds:

<table>
<thead>
<tr>
<th>If student has:</th>
<th>Refund will be:</th>
</tr>
</thead>
<tbody>
<tr>
<td>Enrolled in career major but not started or for a course credited through advanced standing</td>
<td>100%</td>
</tr>
<tr>
<td>Completed up to 25% of scheduled hours for career major</td>
<td>75%</td>
</tr>
<tr>
<td>Completed between 25% and 50% of scheduled hours for career major</td>
<td>50%</td>
</tr>
<tr>
<td>Completed between 50% and 75% of scheduled hours for career major</td>
<td>25%</td>
</tr>
<tr>
<td>Completed 75% or more of scheduled hours for career major</td>
<td>0%</td>
</tr>
</tbody>
</table>

No refunds will be given for books, supplies, or any other non-tuition items. If a full-time student’s tuition is paid through financial aid or agency assistance, refunds will be handled according to the rules and policies of the tuition source.
Agriculture, Food & Natural Resources Cluster

The production, processing, marketing, distribution, financing, and development of agricultural commodities and resources including food, fiber, wood products, natural resources, horticulture, and other plant and animal products/resources.
Floral Design Entrepreneur

Career Major Description
This major addresses the skills needed to be a successful floral designer as well as manage/own a retail floral business. Students will apply the leadership and business skills needed to succeed in the floriculture industry.

Average Oklahoma Salary
Dependent upon the success of the business

Horticulture Entrepreneur

**Career Major Description**
This major introduces students to safe practices, use of tools and equipment and planting techniques. Students learn to care for plants as well as the safe uses of chemicals and testing soil as it relates to the horticulture industry. Through this major study, students will also refine skills that will help them with horticultural entrepreneurial ventures.

**Average Oklahoma Salary**
Dependent upon the success of the business

Horticulture Technician

Career Major Description
This major prepares students as horticultural assistants who undertake a range of tasks that relate to cultivation, growing, harvesting and maintenance of trees, plants and gardens. Students learn safe practices, use of tools and equipment, propagation and care of plants, soil testing, and preparation and safe application of chemicals. Included is information concerning construction, operation, and management of greenhouses.

Average Oklahoma Salary
$10/hr

Helpful Attributes and Abilities
• Reading and math skills at the 8th grade level or above
• Some background in biology
• Good eye-hand coordination and manual dexterity
• Good physical and mental health
• Be able to work under extreme weather conditions
• An ability to work independently and as part of a team
• Dependability
• Organizational skills
• Attention to detail
• Good communication skills
• Ability to take directions from others
• Keyboarding skills

Computer-Aided Drafting & Design Architectural Technician

**Career Major Description**
Learn to convert the ideas and specifications of the engineer architect into working drawings by utilizing both manual sketching and parametric solid modeling methods that meet ANSI (American National Standards Institute) and/or AIA (American Institute of Architecture) drafting standards. Students will be trained with some of the most challenging and expanding equipment in the CAD industry. This major prepares the student for an exciting career in a CAD field or for advancing to a college or university to complete a higher degree.

ARCHITECTURE & CONSTRUCTION

Electrician’s Assistant Unlimited Complete

Career Major Description
This major prepares students as electrician’s assistants who assist in installing, diagnosing and repairing electrical systems for residential, commercial and industrial applications. Students are trained in safety practices, hand and power tools/equipment use and application and electrical theory along AC/DC circuitry, and wiring applications. Included are motors, motor control circuits, and power distribution systems as well as industrial controls, electromechanical devices, and the National Electrical Code. Hours completed in this major can be counted toward the 8,000 hours (four years) of work experience required for the journeyman electrician license.

Average Oklahoma Salary
$18/hour

HVACR Technician

Career Major Description
Learn to install, troubleshoot, adjust, and repair residential and some light commercial heating and air conditioning (HVAC) systems. This major covers the essential knowledge and skills necessary for troubleshooting and installation of various heating and air conditioning systems and includes hands-on labs for various heating, air conditioning, and refrigeration systems along with electricity, solder and brazing, piping and heat fusion processes. Specialized training for EPA certification in refrigerants is also included. After completing the major with 1,065 hours, applicants with at least one year on the job experience may apply to take the Oklahoma Mechanical Journeyman HVAC test.

Average Oklahoma Salary
$16/hour

Helpful Attributes and Abilities
• Math skills at the 10th grade level or above
• An ability to read and write at a 10th grade level
• An ability to compute percentages, measurements and simple fractions

Advanced Unlicensed Assistant

Career Major Description
Students in this career major will learn the functions of an Advanced Unlicensed Assistant, which includes performing more advanced functions in an assistive role with a licensed practical nurse or registered nurse in acute care facilities. They will complete a long-term care course and then proceed into the advanced curriculum and learn how to perform sterile specimen collection, urinary catheterization, and feeding per gastrointestinal tube. Advanced Unlicensed Assistant (AUA) certification must be obtained from the Oklahoma Board of Nursing.

Biomedical Sciences Academy

**Career Major Description**

Students in this major will study biomedical science through the exciting Project-Lead-the-Way (PLTW) curriculum that will provide students hand on projects, labs, and experiences. Topics will include bioinformatics, human medicine, and an in depth study of the human body. In addition, students will complete advanced math and science courses. Students who complete this major will have been exposed to a diverse curriculum that will better equip them to choose and be successful in a major at the college/university level. Students will also have the strong math and science foundation needed to be prepared for a college/university program in STEM (Science, Technology, Engineering, & Mathematics) related fields.

NOTE: Students will take the four required PLTW courses. Then they will take a combination of math and sciences as determined by course availability to complete the other 480 hours of the 960 hour major.

**Course Title** | **Hours**
--- | ---
Principles of Biomedical Sciences (PLTW) | 120

Medical Assistant

Career Major Description
Medical assistants are multi-skilled health professionals who work primarily in ambulatory settings such as medical offices and clinics. They perform clinical and administrative tasks and their duties vary by office or clinic. The major combines classroom, laboratory and work-site learning components to ensure that each student achieves entry-level competencies for the medical assistant. Students practice in a variety of settings as chosen by the instructor. Students completing this career major will be eligible to sit for the Certified or Registered Medical Assistant exam.

Average Oklahoma Salary

Nurse Aide

Career Major Description
Nursing aides help patients with routine healthcare needs, bedside care, and basic nursing procedures. They are often employed in long-term care facilities and hospitals. They play a vital role in the health care team. In this major, students will complete the health care core curriculum, medical terminology, and anatomy and physiology in addition to the long term care curriculum. Students must pass the Oklahoma State Nurse Aide Registry exam for long-term care assistants to work in any facility.

Average Oklahoma Salary
$9/hour

Helpful Attributes and Abilities

Early Care and Education Master Teacher

Career Major Description
This major prepares students to be licensed teachers in early care and education facilities responsible for the general supervision, development, and education of children. In addition to learning how to attend to children’s basic needs, students learn to organize activities that stimulate a child’s physical, emotional, intellectual, social and creative growth. Instruction occurs in the classroom and laboratory as well as in a supervised practicum experience. Successful completion of Master Teacher curriculum with three months full-time experience meets the Licensing and Stars Criteria of Oklahoma for Master Teacher.

Average Oklahoma Salary
$11/hour

Helpful Attributes and Abilities
• Good physical and mental health
• Patience and enthusiasm for working with children
• Good human relations skills
• Planning and organizational skills
• Creative thinking skills
• Reading and math skills at the 8th grade level or above

Esthetician

Career Major Description
This major prepares students to become licensed aestheticians who provide skin care, make-up and non-permanent hair removal services to customers. Students receive classroom instruction on functions of the skin and skin structures, disorders, and diseases along with hands-on training in cleansing and massage, makeup application, and facial treatments. Included are cosmetology laws, rules and regulations, and salon development. To obtain state licensing, students must complete 600 hours of instruction and pass the Oklahoma State Board of Cosmetology written and practical exams. High school students may spend additional hours in training beyond the school year to meet state licensing requirements and for major completion within one year.

Structural Welder

Career Major Description
Learn to do structural welding to use either in construction or as a structural steel fabricator. This major covers welding theory, fabrication, layout, print reading, welding symbols, math, and welding codes with specialized instruction in Shielded Metal Arc Welding (stick), Gas Metal Arc Welding (MIG), Flux-cored Arc Welding (FCAW), and Gas Tungsten Arc Welding (TIG) techniques. This major offers specialized preparation for structural certification by the American Welding Society (AWS).

Average Oklahoma Salary
$14-16/hour

Helpful Attributes and Abilities
• Reading and math skills at the 10th grade level or above
• An ability to compute percentages, measurements and simple fractions
• A basic knowledge of general science
• Good eye-hand coordination

Careers in planning, managing and performing marketing activities to reach organizational objectives.
Entrepreneurship-Introduction

Career Major Description
This major introduces students to the concept of entrepreneurship. Students acquire knowledge of the nature and scope of entrepreneurship and the impact of entrepreneurship on market economies. Students examine and develop the personal traits and behaviors fundamental to becoming a successful entrepreneur, and they are exposed to the first steps of the entrepreneurial process. In addition, students develop an understanding of economic concepts and marketing functions.

Small Business Entrepreneur

**Career Major Description**
This major prepares students to start their own businesses. Self-assessment activities help students determine their entrepreneurial potential. Using skills gained in accounting, buying and merchandising, e-commerce, marketing and advertising, students develop their own detailed business plan. They also explore the economic advantages and disadvantages of international trade. Students develop leadership traits and identify their leadership potential through participation in the DECA (an association of marketing students) student organization.

Advanced PLTW Pre-Engineering

**Career Major Description**
Students in this major will study pre-engineering through the exciting Project-Lead-the-Way (PLTW) curriculum that will provide students hands on projects and experiences. In addition, students will complete advanced math and science courses. Students who complete this major will have been exposed to a diverse curriculum that will better equip them to choose a major at the college/university level. Students will also have the strong math and science foundation needed to be prepared to enter a college/university program in a pre-engineering related field.

NOTE: Students will take the required PLTW courses then they may choose any combination of math and sciences to complete the remaining hours of the 1440 hour major.

**Average Oklahoma Salary**
Varies

**Helpful Attributes and Abilities**
- Reading, language and math skills at the 9th grade level or above
- Ability to take directions from others
- Good eye-hand coordination
- Manual dexterity
- Ability to stand for long periods of time
- Ability to handle high stress situations
- Good physical and mental health
- Attention to detail
- Ability to organize and prioritize
- Ability to be a team player
- Ability to work in a fast-paced environment

**Who Can Enroll**

Transportation, Distribution & Logistics

Automotive Maintenance & Light Repair Technician-NATEF aligned

Career Major Description
Students in this major will cover the skills necessary to enter the automotive industry to perform light repair and maintenance duties. Students will concentrate on courses in introduction, brakes, steering & suspension, electrical electronics, and engine performance. They will learn how to test and lubricate engines and other major components and replace worn parts before they cause breakdowns. The student will also perform diagnostics to determine whether a component is salvageable or needs to be replaced. The hours completed in this major are aligned with the four required minimum ASE/NATEF standards. ASE certification is recommended and industry recognized. Course Title

Average Oklahoma Salary
$14/hour

Helpful Attributes and Abilities
• Reading and math skills at the 9th grade level or above
• Basic computer literacy/skills
• Ability to understand theory and technical information
• Ability to read and comprehend textbook and shop manuals
• Ability to complete basic math problems
• Good health, physical condition and manual dexterity
• Ability to lift heavy objects and stand/work on your feet for extended periods of time
• Endurance to work under adverse weather conditions
• Good communication skills

TRANSPORTATION, DISTRIBUTION & LOGISTICS

Automotive Service Technician-NATEF compliant

Career Major Description
According to the most recent NATEF Automotive Service Technician standards, students in this major will cover the skills necessary to become an entry-level technician. Students will concentrate on courses in introduction, brakes, steering & suspension, electrical/electronics, engine performance, heating & air conditioning, engine repair, automatic transmission, and manual drive train and axles. They will learn how to diagnose and complete brake service, perform vehicle steering and suspension alignment, as well as electrical theory, electrical/electronic diagnostics. Students will cover engine performance diagnostics and techniques for repair using a variety of diagnostic equipment. This career major includes automotive heating, air conditioning and the student will learn how to evacuate and recharge air-conditioning systems using the proper refrigerant, as well as diagnostics of the heat and A/C system. Students will use advanced diagnostic and repair equipment to troubleshoot complex automotive systems. This career major is intended to provide courses closely aligned with NATEF hours and tasks. ASE certification is recommended and industry recognized.

Average Oklahoma Salary
$15/hour

Helpful Attributes and Abilities
- Reading and math skills at the 9th grade level or above
- Basic computer literacy/skills
- Ability to understand theory and technical information
- Ability to read and comprehend textbook and shop manuals
- Ability to complete basic math problems
- Good health, physical condition and manual dexterity
- Ability to lift heavy objects and stand/work on your feet for extended periods of time
- Endurance to work under adverse weather conditions
- Good communication skills

Aviation Maintenance Technician

**Career Major Description**
Learn to inspect and perform or supervise maintenance, preventive maintenance, and alteration of aircraft and aircraft systems. This major prepares the student with the knowledge and skill required to pass both the Airframe Mechanic and the Powerplant Mechanic exams administered by the FAA to gain entry level employment in aviation and other maintenance fields throughout the world. The Aviation Maintenance Technician major is certified under Part 147 of the Federal Aviation Regulations with an FAA-approved and -supervised curriculum.

**Average Oklahoma Salary**
$21/hour

**Helpful Attributes and Abilities**
- General math, Algebra I, general science or equivalent courses
- Reading and math skills at the 10th grade level or above
- Good manual dexterity and agility
- Average or better mechanical aptitude
- Ability to comprehend and apply basic math and physics concepts

Avionics Technician

Career Major Description
As the need to maintain our nation’s vastly different aircraft continues to become more complex, the Avionics Technician career major assists students in acquiring the knowledge, education and training standards associated with the daily duties, tasks and maintenance of today’s aviation electronics. Students will learn basic principles of physics and aerodynamics as well as safe ground handling procedures, aircraft drawings, and blueprints. Through instructor-lead lectures, open discussions, NIDA instructional support software, and extensive hands-on activities, successful students will become fluent in DC circuits, AC circuits, solid-state devices and technologies, digital systems technologies (the future of aviation instrumentation, a.k.a. “the glass cockpit”), high-reliability soldering techniques, terminal connectivity, and troubleshooting techniques.

Oklahoma Board of Career and Technology Education (OBCTE)
Oklahoma State Board of Education (OSBE)
Combination Collision Repair Technician

Career Major Description
Students in this major will learn how to complete non-structural collision repair and automotive refinishing. The courses that will be covered include non-structural damage analysis and minor dent repair, plastics repair and all aspects painting and refinishing. Students will also learn how to use various tools in repairing damage and to remove and install handles, moldings, trim, and bolted body parts. In addition, the student will learn to MIG weld to industry standard following I-CAR standards. This career major also includes painting preparation, sanding processes, color matching and adjusting color, removing and installing glass, and the process of written estimates. Students will learn about handling, storage and disposal of hazardous materials and selecting proper personal protective equipment and maintenance. The hours completed in this major are aligned with NATEF standards.

Average Oklahoma Salary
$16/hour

Helpful Attributes and Abilities
- Reading and math skills at the 8th grade level or above
- Good health and physical condition
- Good eye-hand coordination
- Ability to think critically and logically
- Ability to organize one’s work
- Sheet metal/welding, wood shop, industrial art and mechanical ability
- Ability to organize movements around and under automobiles
- Ability to mentally plan collision repair

Non-Structural Repair Technician

Career Major Description
Students in this major will learn skills in basic collision repair including damage analysis to determine necessary repair procedure. Students will cover the operation of tools and personal safety equipment maintenance. They will learn how to use metal straightening tools to repair minor dents and dings in sheet metal as well as metal shrinking and stretching techniques. Students will also learn the techniques for mixing and applying body filler, selecting the proper sandpaper and sanding equipment, techniques for properly sanding the cured body filler to original contour, and how to prepare the repair for primer. Also included is the removal and installation of handles, trim, moldings and locks. The hours completed in this major are aligned with NATEF standards.

Refinishing Technician

**Career Major Description**
Students in this major will learn how to perform vehicle refinishing which will include both complete and partial vehicle refinishing. Students will learn about handling, storage and disposal of hazardous materials and selecting proper personal protective equipment and maintenance. Students will cover preparation of a vehicle for refinishing; mixing and applying refinishing material as well as adjust paint colors. They will learn how to remove and install handles, locks, molding and trim, the proper techniques for sanding, proper use of a spray-gun, sealers and top-coats, color matching and adjustment and masking techniques that are used for blending. In addition, they will also learn how to determine the cause and corrective action for refinishing defects and failures. Interior/exterior detailing will also be covered. The hours completed in this major are aligned with NATEF standards.

Course Descriptions
Agriculture, Food & Natural Resources

Agricultural Plants 60 hours
This course is designed to prepare the student for taking the Agricultural Plant Certification test.

Applying Pesticides 45 hours
This course is designed to prepare the student to pass the Core Test to become a certified pesticide applicator. Covered are environmental concerns related to the use of pesticides, chemical safety and alternative pest control.

Basic Techniques and Styles 30 hours
Students will learn shapes of arrangements; seasonal, holiday and special designs; flowers to wear; and everlasting flowers.

Fertilizers and Soils 90 hours
This course is designed to introduce students to the basis of plant growth, the soil and it's nutrients. Areas addressed in this course will include erosion control, soil preparation, media preparation, soil pasteurization, cultivation, seed bed preparation, soil sampling and soil tests and their interpretation.

Field Scouting, Weed Collection and Insect Collection 60 hours
This course is designed to train students in the processes required to inspect fields for insects and weeds that could affect the growth of plants. It covers the processes for entering and using collected data to make a determination about appropriate nutrients and pesticides to protect plant growth.

Floral Industry 30 hours
Students will learn the flower harvesting processes, distribution processes, and retail flower shop operations and careers.

Floral Processing & Conditioning 30 hours
Students will learn the skills and techniques needed to maintain and increase the shelf life of cut flowers.

Flowers and foliage 75 hours
Students will learn care and handling, harvesting and identification of flowers and foliage.

Greenhouse Operations & Management 120 hours
This course will cover the total operations and management of a greenhouse. Students will gain the knowledge and skills required to gain employment in the greenhouse industry and the skills to move up the career ladder. It also addresses the construction factors to consider when building a greenhouse and marketing strategies. Included is an internship in a business with greenhouse facilities.

Horticulture Entrepreneurship 105 hours
This course provides students with a guide to creating a business plan as well as following basic accounting procedures. Students will also learn to identify legal issues as they relate to the profession. The course will also introduce the students to marketing their field of study.

Identification & Propagation of Horticulture Plants 90 hours
This course is designed to give students practical experience in reproducing and starting horticultural plant materials through both sexual and asexual methods. Included is identification of ornamental plants.

Price Structuring 60 hours
Course will teach students how to price products. They will also learn the difference in wholesale and retail pricing, as well as structuring quantity discount pricing.

Principles of Horticulture 30 hours
This course is designed to prepare students for further studies in Horticulture. Careers and areas of horticulture are explored, as is how horticulture fits into the field of plant agriculture. Greenhouse watering, tools, safety, and plant growth are all aspects of this course.

Retail Flower Shop 200 hours
This course focuses on the business side of a retail flower shop.

Theory & Design 300 hours
Students will learn plant history, harmony, unity, color, balance, proportion, scale, focal point, rhythm line, form space, depth, texture and mechanics of floral design.

Workforce Staging 30 hours
This course is designed to be delivered as an integrated component within the courses taken by the individual student. The course is designed for the development of leadership, personal development and employability skills.

Architecture and Construction

Advanced Cabinet Construction 45 hours
This course introduces the student to materials used in cabinets and store fixtures. The course also covers blueprint reading for cabinets and fixtures. Students will plan, cut out and construct European cabinets, install hardware and use guides for European and store fixtures.

Advanced Stair Systems 45 hours
This course is an introduction to the materials and techniques required in finishing wooden staircases and other applications used in commercial stair construction.

Air Conditioning Systems 120 hours
This course is an introduction to unitary cooling, central station systems, service and problem analysis, absorption refrigeration, desiccant cooling and dehumidification. Prerequisite: Refrigerant System Components

Alternating Current Circuits in Construction 90 hours
This course covers electrical theory in AC circuits and develops understanding of generation, amplitude, phase, phase shift, power factor, measurement methods, and troubleshooting skills.

Architecture and Construction Core 90 Hours
This course is an introduction to basic safety, construction math, hand tools, power tools, blueprint reading, rigging, communication skills and employability skills.

Architecture Computer-Aided Drafting & Design 120 hours
This course is a basic Architectural Drafting course utilizing Computer-Aided Drafting and Design (CADD) software that develops computer skills and electronic skills and applications within the field of architectural drafting. Topics covered are advanced computer operations, introduction to residential architecture drafting, CADD application software, site conditions/plot plans, lettering and tools, residential design/room layout, structural systems and building materials, working drawings/floor plans and details, dimensioning, foundations, electrical/mechanical/plumbing, presentation drawings, interior and exterior elevations, roof plans, commercial architectural drafting, structural steel framing plans, pre-cast concrete, framing plans, foundations and walls and structural wood.

Basic Cabinet Construction 60 hours
This course is an introduction to calculating materials to create cut lists, proper use of tools and fasteners, wall cabinet construction, base cabinet construction, and specialty cabinet construction.

Basic Cabinet Construction Techniques 150 Hours
This course is an introduction to calculating materials, creating cut lists, safely operating hand and power tools and fasteners, and constructing wall, base and specialty cabinets.

<td>included. This is a project-based course that requires lab work. Prerequisite:</td>
<td></td>
</tr>
<tr>
<td>CAD Civil Level 1</td>
<td></td>
</tr>
<tr>
<td>Cold-formed Steel Framing</td>
<td>45</td>
</tr>
<tr>
<td>In this course students learn the uses and installation of cold-formed</td>
<td></td>
</tr>
<tr>
<td>steel framing for commercial and multi-family residential construction.</td>
<td></td>
</tr>
<tr>
<td>Commercial Finish I</td>
<td>60</td>
</tr>
<tr>
<td>This course introduces the student to safety, layout, wall systems,</td>
<td></td>
</tr>
<tr>
<td>drywall installation and finishing and ceiling systems.</td>
<td></td>
</tr>
<tr>
<td>Commercial Wiring Methods</td>
<td>120</td>
</tr>
<tr>
<td>This course covers the circuits used in wiring commercial premises</td>
<td></td>
</tr>
<tr>
<td>including service entry and branch circuit installation, load distribution,</td>
<td></td>
</tr>
<tr>
<td>device installation, grounding, overcurrent devices, conduit bending and</td>
<td></td>
</tr>
<tr>
<td>installation, panels and switchboards, and hazardous locations. Prerequisite:</td>
<td></td>
</tr>
<tr>
<td>Completion of Residential Wiring course sequence</td>
<td></td>
</tr>
<tr>
<td>Concrete and Reinforcing Materials</td>
<td>15</td>
</tr>
<tr>
<td>In this course, students are introduced to properties, characteristics,</td>
<td></td>
</tr>
<tr>
<td>and uses of concrete, estimating concrete volume, testing methods and</td>
<td></td>
</tr>
<tr>
<td>concrete reinforcement are also covered.</td>
<td></td>
</tr>
<tr>
<td>Construction Core</td>
<td>120</td>
</tr>
<tr>
<td>This course introduces the student to basic safety, construction math,</td>
<td></td>
</tr>
<tr>
<td>tools, blueprints and rigging. Communications and employability skills are</td>
<td></td>
</tr>
<tr>
<td>covered.</td>
<td></td>
</tr>
<tr>
<td>Construction Math</td>
<td>15</td>
</tr>
<tr>
<td>This course is an introduction to basic math functions such as addition,</td>
<td></td>
</tr>
<tr>
<td>subtraction, division, multiplication, whole numbers, fractions and</td>
<td></td>
</tr>
<tr>
<td>decimals. Other math topics covered include decimal-fraction conversions,</td>
<td></td>
</tr>
<tr>
<td>metro system, basic geometry and its application to common shapes and forms.</td>
<td></td>
</tr>
<tr>
<td>Students will learn to apply mathematic principles to the construction</td>
<td></td>
</tr>
<tr>
<td>industries.</td>
<td></td>
</tr>
<tr>
<td>Counter Tops &amp; Laminates</td>
<td>30</td>
</tr>
<tr>
<td>Construction</td>
<td></td>
</tr>
<tr>
<td>This course introduces students to designing, constructing and</td>
<td></td>
</tr>
<tr>
<td>installing countertops. In addition, students will learn to estimate</td>
<td></td>
</tr>
<tr>
<td>materials, prepare surfaces, apply laminates and patch and repair.</td>
<td></td>
</tr>
<tr>
<td>Direct Current Circuits in Construction</td>
<td>60</td>
</tr>
<tr>
<td>This course covers electrical theory in DC circuits and develops a student's</td>
<td></td>
</tr>
<tr>
<td>understanding of the electrical units of volts, ohms, amps, and watts,</td>
<td></td>
</tr>
<tr>
<td>measurement equipment and methods, interrelationships, and troubleshooting</td>
<td></td>
</tr>
<tr>
<td>skills. Prerequisite: Electrical Safety in Construction</td>
<td></td>
</tr>
<tr>
<td>Dispensing Freezers</td>
<td>90</td>
</tr>
<tr>
<td>This course will prepare students to select applications, install, service,</td>
<td></td>
</tr>
<tr>
<td>troubleshoot, and maintain dispensing freezers and includes specific</td>
<td></td>
</tr>
<tr>
<td>electrical, mechanical, refrigeration, and sanitation issues associated</td>
<td></td>
</tr>
<tr>
<td>with this equipment.</td>
<td></td>
</tr>
<tr>
<td>Drawing and Document Management</td>
<td>45</td>
</tr>
<tr>
<td>This course is for the development of skills for file management and use</td>
<td></td>
</tr>
<tr>
<td>of technology to support effective organizational skills within</td>
<td></td>
</tr>
<tr>
<td>occupational workflow and processes.</td>
<td></td>
</tr>
<tr>
<td>Drywall Finishing</td>
<td>45</td>
</tr>
<tr>
<td>This course introduces the student to layout and framing walls and</td>
<td></td>
</tr>
<tr>
<td>ceilings as well as estimating materials required.</td>
<td></td>
</tr>
<tr>
<td>Electrical Distribution in Construction</td>
<td>60</td>
</tr>
<tr>
<td>This course, the student gains skills required to install drywall in</td>
<td></td>
</tr>
<tr>
<td>residential and commercial applications.</td>
<td></td>
</tr>

</table>
| 121
Architecture and Construction (continued)

Electrical Power & Hand Tools and Equipment in Construction 30 hours
This course covers the safe use, operations and maintenance of power and hand tools used in construction.

Electrical Safety in Construction 15 hours
Safety rules and regulations for electricians, precautions for electrical and mechanical hazards on the job, tool and equipment safety, first aid, CPR, blood borne pathogens, OSHA and NFPA mandated lockout/tagout, personal protective equipment, right to know, and confined space entry procedures.

Electrical Schematic & Blueprint Reading in Construction 45 hours
This course prepares the student to interpret standard electrical schematics and construction blueprints.

Electrical Theory in Construction 120 hours
This course covers Ohms law and concepts of electrical theory necessary to install, maintain and troubleshoot electrical circuits.

Electricity for HVAC/R 60 hours
This course teaches students fundamental and advanced concepts in electricity, including electrical generation and distribution, electrical components, electrical motors, electrical circuits and controls, and prepares them to effectively troubleshoot and replace or repair devices in electrical circuits. Prerequisite: Intro to HVAC/R: Safety, Tools and Equipment

Exterior Finishing 45 hours
This course is an introduction to types of exterior siding; siding used in residential construction and its installation procedures; use of wood, metal and vinyl siding; and installation of metal and vinyl guttering and downspouts.

Floor Systems 30 hours
In this course, students learn to layout and frame wood floors using common lumber and engineered materials.

Fundamentals of Cabinetmaking 30 hours
This course introduces the student to measurement, basic math, fractions, square and board footage, geometry and algebra, blueprint reading, scales and dimensions, details and specifications, lumber and engineered material identification and grading and plywood identification and grading.

Fundamentals of Computer-Aided Drafting and Design 120 hours
This course is the basic CAD software course. Topics covered are safety, tools, equipment, media and reproduction, sketching, scale usage, drawing formats, alphabet of lines, lettering and geometric construction, computer literacy through CAD, operating systems and file utilities, software functions, office functions, hardware applications, coordinates, drawing environment, plotting, printing, multi-view drawing environment, geometry modifications and dimensioning, symbol library development, introduction to parametric and software, introduction to multiple CAD software used to manipulate text and graphics, and basic CAD applications.

Furniture Design and Construction 45 hours
This course introduces students to furniture design, theory, estimating and construction. Finishing techniques are also covered.

General Construction Safety and First Aid 30 hours
General construction safety including tool and equipment safety, blood borne pathogens, CPR, PPE, confined space entry, hazardous materials and right to know.

Heat Pumps 30 hours
This course covers the essential knowledge necessary to install, service, troubleshoot, and repair heat pumps. Emphasis will be placed on air-to-air systems, but ground source systems will be introduced and briefly examined. Topics will include a review of the refrigeration cycle, reversing valves, the defrost cycle, defrost timers including electromechanical as well as solid state devices, balance point, and backup heat systems. Prerequisite: Refrigerants & Lubricants; Refrigerant Recovery; Electricity for HVAC/R; HVAC/R Controls; HVAC/R Solid State Electronics; Air Conditioning Systems

Heating Systems 120 hours
This course covers the essential knowledge and skills of installing, maintaining, servicing, troubleshooting, and repairing various heating systems, including forced air, convection, hydronic, and radiant. Gas LP, natural gas, and electrical systems will be examined. Emphasis will be placed on gas and electric forced air systems, but heat pumps (air to air and ground source) will be introduced. Hands-on labs will be an extensive part of the course. Prerequisite: HVAC/R Solid State Electronics

HVAC/R Codes, Regulations & Standards 30 hours
This course covers the essential knowledge and skills necessary to adhere to the codes and standards pertaining to the HVAC/R industry, regulations affecting ozone depletion, state and local codes, OSHA, and government licensing requirements.

HVAC/R Controls 45 hours
This course is an introduction to controls, gas valves, fuel controls, residential control systems-heating/cooling, commercial control systems, heat pump controls, direct digital controls (DDC), and energy management systems (EMS). Students will also be introduced to psychrometrics, heating loads, and refrigeration load calculations. Prerequisite: Electricity for HVAC/R

HVAC/R Preventive Maintenance 15 hours
This course covers the essential knowledge and skills necessary to use the manufacturer’s literature to properly service common residential HVAC/R equipment. Emphasis will be placed on confirming proper operation for safety, efficiency, and reliability. Minor troubleshooting and repair skills will be covered along with generating proper documentation for preventive maintenance. Prerequisite: Intro to HVAC/R: Safety, Tools and Equipment; Refrigerants & Lubricants; Refrigerant Recovery; Air Handling; Refrigerant System Components

HVAC/R System Installation & Start-up—Residential 120 hours
This course covers the essential knowledge and skills necessary to use the manufacturer’s literature to properly install and start-up common residential HVAC/R equipment. Special attention will be given to a thorough understanding of the refrigeration cycle and equipment, heating systems, air flow and balancing systems, air quality issues, and building codes that regulate the HVAC/R industry in residential applications. Emphasis will be placed on confirming proper operation for safety, efficiency, and reliability. Minor troubleshooting and repair skills will be covered. Prerequisite: Refrigerants & Lubricants; Refrigerant Recovery; Air Handling; Refrigerant System Components; Heating Systems

HVAC/R System Servicing & Troubleshooting—Residential 90 hours
This course covers the essential knowledge and skills necessary to perform routine residential central HVAC systems servicing to promote efficient operation and long life. Extensive attention will be given to troubleshooting techniques used in solving mechanical, electrical, heating, refrigerant, and air-flow problems common to small tonnage HVAC systems commonly found in residences and small commercial applications. Prerequisite: Refrigerants & Lubricants; Refrigerant Recovery; Air Handling; Refrigerant System Components; HVAC/R Controls; HVAC/R Solid State Electronics; Heating Systems;
Indoor Air Quality 15 hours
This course is an introduction to indoor air quality (IAQ) requirements, maintaining indoor air quality, air quality issues including filtration, humidification/dehumidification, and building related illness ("Sick Building Syndrome") and will cover factors that make up acceptable indoor air quality. Prerequisite: Principles of Thermodynamics and Heat Transfer

Industrial Wiring Methods in Construction 120 hours
This course covers the circuits used in wiring industrial premises including service entry and branch circuit installation, load distribution, device installation, grounding, over-current devices, conduit bending and installation, panels and switchboards, and hazardous locations. Prerequisite: Completion of Residential Wiring course sequence and Commercial Wiring Methods

Installation of Interior Doors 15 hours
This course introduces the student to the skills required to properly install all types of interior doors and hardware.

Installing Fixtures, Valves, Faucets & Water Heaters 45 hours
In this course, the student will learn to install bathtubs, shower stalls, valves, faucets, lavatories, sinks, pop-up drains, water closets, urinals, and gas and electric water heaters.

Interior Doors & Trim 30 hours
This course is an introduction to identifying materials and hardware; estimating material needed to trim a room, install interior doorjamb, hang doors, lock and trim, install prehung door and install case opening, install pocket door, install bi-fold door, install window trim, mortise and hinge door frame and door, identify doors from blueprints, install closet shelves and rods, install various trim and molding, and install miscellaneous hardware.

Introduction & Safety 15 hours
This course introduces the student to safe procedures on the job, basic tools and equipment and SkillsUSA PDP.

Introduction to Carpentry 30 hours
In this industry orientation course, the student learns construction safety and is introduced to basic construction tools and materials.

Introduction to HVAC&R: Safety, Tools and Equipment 30 hours
This course is an introduction to air-conditioning and refrigeration, exploring career opportunities in the HVAC&R industry, personal safety and work practices, personal protective equipment, handling pressurized fluids, handling hazardous substances, hand and power tools, and equipment used to test and service heating, air conditioning, and refrigeration equipment, including those used to measure air flow.

Introduction to Interior Doors and Trim 105 hours
This course is designed to prepare students to identify materials and hardware, estimate materials needed to trim a room, install interior doorjamb, hang doors, install locks and trim, install prehung doors, install pocket doors, install bi-fold doors, install window trim, mortise and hinge door frame and door, identify doors from blueprints, install closet shelves and rods, install various trim and molding and install miscellaneous hardware.

Introduction to Masonry 45 hours
This course introduces the student to the materials and the processes used in the masonry trade.

Introduction to Plumbing 30 hours
In this course, the student will learn the history of the plumbing trade and be able to identify the stages of progress within the trade and the responsibilities of a person working in the construction industry. Safety and the personal characteristics of a professional will also be discussed.

Introduction to Windows and Exterior Doors 15 hours
In this course students are introduced to the basic special terms associated with window and door installation. Students learn about the various kinds of windows and exterior doors and the important installation practices related to them.

Light Equipment in Construction 15 hours
This course introduces the student to light equipment used on all residential and commercial construction sites.

Load Calculations 15 hours
This course introduces students to psychrometrics, heating and cooling load calculations, and refrigeration load calculations. Prerequisite: Principles of Thermodynamics and Heat Transfer

Masonry Units & Installation Techniques 90 hours
This course provides the student with detailed information on masonry materials and instructions for building a single-wythe masonry wall.

Metal Stud Framing 45 hours
This course introduces the student to the required methods for installing stud walls using metal framing materials.

Motor Control Wiring in Construction 60 hours
This course covers relays, motor starters, overload sizing, ladder diagrams, and design of complex systems used to control motors in various commercial and industrial applications. Prerequisite: Completion of Residential Wiring course sequence

Motor Theory & Operation in Construction 30 hours
This course covers the theory of operation of AC and DC motors, their construction, selection of appropriate motors for specific applications, and feeder calculations. Prerequisite: Completion of Residential Wiring course sequence

Multiplexed Evaporator Systems 90 hours
This course covers the theory and applications of multiplexed evaporator systems. It includes applications of evaporator and crankcase pressure regulators. Emphasis will be placed on servicing, troubleshooting, and repairing these systems. Prerequisite: Refrigerants & Lubricants; Refrigerant Recovery; Refrigerant System Components;

National Electrical Code in Construction 120 hours
This course prepares the student to locate and interpret specific standards in the NFPA's National Electrical Code. Instruction includes load calculations, conductor sizing, conduit fill calculations, and standards for wiring practices.

Piping & Piping Practices 45 hours
This course is an introduction to piping material and fabrication, pipe sizing and troubleshooting, sheet metal, airflow principles/duct design, mechanical and electronic filtration and fans/blowers.

Plan Reading and Elevations 30 hours
This course introduces the student to basic blueprint reading and is connected to information in the CORE curriculum.

Presentation Graphics Animation 195 hours
In this course, students will utilize drawings as presentation graphics and interface with software and hardware to present and use outcomes of drawings and models in a presentation format electronically and/or media based. Topics covered in this course are Wire Frame/Mesh, Extrusion, Intro to Solid Models, Animation, Software Interface, and 3-D Printing.
**Architecture and Construction (continued)**

**Principles of CAD Design** 165 hours
This course is the basic CAD software course. Topics covered are safety, tools, equipment, media CAD reproduction, sketching, scale usage, drawing formats, alphabet of lines, lettering and geometric construction, computer literacy through CAD, operating systems and file utilities, software functions, office functions, hardware applications, coordinates, drawing environment, plotting, printing, multi-view drawing environment, geometry modifications and dimensioning, symbol library development, introduction to parametric and software, introduction to multiple CAD software used to manipulate text and graphics, and basic CAD applications.

**Principles of Thermodynamics and Heat Transfer** 60 hours
This course is an introduction to matter and heat behavior, fluids and pressures, refrigeration cycle/diagrams and measurement systems.

**Professional Services** 15 hours
This course covers the essential knowledge and skills necessary to provide quality customer service, build character and customer relations, and participate in professional development.

**Programmable Logic Controllers in Construction** 120 hours
This course covers the application of programmable logic controllers in various commercial and industrial applications and includes the application of internal relays, timers, counters, and special functions. Analog inputs and outputs are covered. Prerequisite: Completion of Residential Wiring course sequence

**Refrigerants & Lubricants** 15 hours
This course covers the properties and applications of the many refrigerants used in refrigeration and air conditioning applications. Refrigeration lubricants, their properties and applications, including compatibility issues, with various refrigerants, principles of safe handling for refrigerants and lubricants will be important components of this course. Prerequisite: Principles of Thermodynamics and Heat Transfer

**Residential Exterior Trim & Roof** 60 hours
This course introduces the student to roof safety, roofing materials, flashing and step flashing, valley lap and cuts, roof cap, fascia, soffit, freeze board, brick mold, exterior doors and windows.

**Residential Wiring Methods** 240 hours
This course covers the circuits used in wiring residential premises including service entry and branch circuit installation, load distribution, device installation, grounding, overcurrent devices, and lighting.

**Roof Framing** 30 hours
This course is an introduction to types of roofs, layout instructions for rafters in gable roofs, hip roofs and valley intersections, stick-built, and truss-built roofs.

**Roofing Applications** 60 hours
This course introduces the student to layout and framing walls and ceilings as well as estimating materials required.

**Site Layout One-Distance Measurement and Levelling** 30 hours
This course introduces the student to site layout and framing walls and ceilings as well as estimating materials required.

**Stairs** 15 hours
This course introduces the student to principles, equipment and methods used to perform distance measurement and differential levelling. In addition, students will learn layout responsibilities of surveyors, field engineers and carpenters; use site/plot drawings and practice methods used for on-site communications.

**Suspended Ceilings** 30 hours
In this course, students learn to layout and install suspended ceilings using in commercial construction. This includes ceiling tiles, drywall suspension systems and pan-type ceilings.

**Thermal and Moisture Protection** 15 hours
This course introduces the student to the procedures in determining the appropriate thermal and moisture protection required to complete the project/job.

**Wall and Ceiling Framing** 60 hours
This course covers layout and framing walls and ceilings. Other topics covered include: rough-in doors, window openings, construction of corners, partition Ts, bracing walls, ceilings and applying sheathing.

**Water Distribution, Drain, Waste & Vent Systems** 60 hours
This course is an introduction to the water distribution system and to drain, waste and vent systems.

**Water Supply Piping** 45 hours
In this course, students will identify types of materials and schedules used with a variety of piping materials and will properly measure, cut and join piping materials.

**Windows, Doors, Floors & Ceiling Trim** 30 hours
This course introduces the student to various types of trim used in finish work. Students will learn the proper methods for selection, cutting and attaching trim to provide a quality finish.

**Windows and Exterior Doors** 30 hours
In this course students are introduced to the special terms associated with window and door installation. Students learn about the various kinds of windows and exterior doors and the important installation practices related to them.

**Workforce Connection** 120 hours
This course is a Work-Site Experience (WSE) that is planned, organized, and conducted at the student’s place of employment. WSE will be the primary method used for broadening learner’s skills and increasing effectiveness and productivity. It is particularly appropriate for developing proficiency skills unique to a given occupation - especially occupations that require locally-owned equipment and facilities. Theory based instruction builds upon the knowledge and skills developed in the Workforce Staging course.

**Workforce Staging** 30 hours
This course is designed to be delivered as an integrated component within the courses taken by the individual student. Course is designed for the development of leadership, personal development and employability skills attainment.

**Working in the Green Environment** 15 hours
This course introduces the student to the concepts, materials and uses of environmentally safe materials and construction techniques used in the “green build” approach to construction. Students learn why going green is a smarter and more efficient process to construction and how it will impact the environment and the world we live in.
Arts, A/V Technology Communications

Advanced Web Animation Design 120 hours
In this course, students will use flash software to produce advanced web animation documents.

Animation Overview 45 hours
Students learn the techniques and uses of basic animation.

Basic Illustration 90 hours
In this course, students prepare a variety of illustrations by hand.

Commercial and Private Vehicle Graphics Installation 90 hours
Students will learn to provide application services for vehicle wraps, vehicle decals, trailer and fleet graphics, bus wraps, window decals, wall graphics, boat wraps, and other surfaces graphic film will adhere to as well.

Computer Fundamentals 45 hours
Students learn to operate hardware components using the Windows or Macintosh computer system. They also work with software, to create a hierarchical filing System. Students practice keyboarding to increase speed and accuracy: 40 wpm/90% accuracy.

Copyright Law 15 hours
Students learn the principles of copyright law for both published and electronic materials.

Design and Color Principles 60 hours
In this course students identify and practice elements and principles of design theory.

Design and Color Principles-Web 75 hours
In this course, students plan and prepare a website for production.

Design and Layout 60 hours
Students will use hand and computer generated art along with text to produce various types of layouts to meet customer’s demands. Assignments include demonstrating proficiency in hand drawing thumbnail and rough layouts through preparing comprehensive layouts on the computer.

Digital File Prep 60 hours
This course covers preparing and troubleshooting digital files for various output needs.

Digital Illustration 90 hours
Using illustration software, students create, import, edit and prepare a variety of illustrations.

Digital Image Manipulation 60 hours
Students use digital image manipulation software to create, modify and prepare a variety of images.

Digital Page Layout 180 hours
Students use a page layout software to create, modify and prepare a variety of documents.

Digital Typography 45 hours
Students apply knowledge and skills gained in the Typography course to produce digital projects.

Graphic Design Mathematics 15 hours
Students learn basic mathematics within the graphic areas, including addition, subtraction, division, multiplication, fractions, decimals, picas and points.

Independent Studies in Video Production 120 hours
Students at this level develop a higher level of video production skills. Activities include exploration in advanced editing projects, and individuals pursue an area of interest in video production under the direction of the instructor. Students develop digital portfolios of advanced work.

Introduction to Graphic Communications 120 hour
This course provides an introduction to the graphic communications industry.

Page Layout & Publication Design 120 hours
In this course, students will use basic layouts to produce publications.

Portfolio Development 60 hours
In this course, students design and develop projects for a personal portfolio.

Portfolio Production 45 hours
In this course, students produce portfolios appropriate to the web design industry.

Post Production Digital Video Special Effects 90 hours
Students will create, generate, and integrate 3D special effects using computer graphics and renderings. Students will use software-generated special effects as well as 3D software to design motion graphics and visual effects that deliver the desired results.

Professional and Personal Development 15 hours
Students gain human relations skills for successful employment. Time management, self-motivation, problem solving, communication and leadership techniques are stressed. Student organization activities are included.

Professionalism and Ethics 30 hours
This course teaches professionalism and ethics as they relate to the workplace. Students also cover legal and ethical issues related to television.

Project Management Conceptual Design Process 90 hours
In this course students learn to manage a design project from concept to completion.

Safety 15 hours
Students learn proper safety procedures to follow in the classroom and lab.

Screen Printing and Vinyl Art Preparation 45 hours
In this course, students learn the production side of vinyl signage and screen printing of T-shirts.

Typography 45 hours
Students identify type anatomy and use type appropriately to design materials.

Video Production Techniques I 120 hours
Students are introduced to the basic concepts of script writing and on-camera communication skills and production techniques. The student gains practical experience in a variety of studio lab and field projects.

Video Systems - Post-production 45 hours
The course covers post-production video techniques.

Video/Camera 165 hours
This course covers the commercial uses of the camera for effect. It covers all aspects of camera work including color, background, lighting and styles.

Web Animation 90 hours
Students create and edit animated graphics.

Web Authoring 90 hours
Students learn to plan, structure, design and create a web page project using HTML and cascading style sheets.

Web Site Production 90 hours
Students use Dreamweaver software, to plan, structure, design, and edit web sites.

Workbased Learning Capstone/OJT 75 hours
Students in this course put into practice all of the skills learned in this major. Students may work at a job site location to reinforce occupational and employability skills. This internship experience is designed to bridge the gap between school and work.

Workforce Staging 30 hours
This course is designed to be delivered as an integrated component within the courses taken by the individual student. Course is designed for the development of leadership, personal development and employability skills attainment.
Business, Management & Administration

Administrative Assistant Capstone 150 hours
Work-based learning experience, project-based instruction and additional industry certifications will be utilized to reinforce skills obtained within any career major in the Business, Management and Administration cluster. Students will make final preparation for industry certifications and will finalize portfolios that highlight skills and certifications. Students may also undertake special projects, cross-train or participate in workplace learning opportunities to enhance skills in accordance with industry demands. Prerequisite: All other courses in career major.

Administrative Technologies II 120 hours
This course builds on skills learned in the Fundamentals of Administrative Technology course and provides students with the ability to utilize, analyze, and manipulate data through a database application. The integration of multiple applications builds critical thinking skills as students utilize the appropriate applications needed to complete case projects. Prerequisite: Fundamentals of Administrative Technologies.

Advanced Computer Applications for the Law Office 180 hours
This course provides students with the advanced software skills needed for the Legal Office. Students work with Microsoft Word and WordPerfect to learn legal document formatting. Advanced presentation software skills are also covered. Prerequisite: Foundations for the Legal Office.

Advanced Legal Communications 180 hours
In this course students gain skills to communicate effectively in a law office. Transcription, dictation, legal citations, law library research and docket management are included along with advanced business correspondence and legal terminology. Prerequisite: Advanced Computer Applications for the Law Office.

Electronic Health Records I 120 hours
In this course students learn to manage electronic health information using common electronic data interchange systems. Through classroom and computer lab training students acquire the skills necessary to maintain the medical, legal, accreditation and regulatory requirements of the electronic health record and database; project management and fundamentals of change. Prerequisite: Fundamentals of Administrative Technologies.

Electronic Health Records II 120 hours
This course builds on the skills learned in the Electronic Health Records I course as students continue to learn how to manage electronic health information using common electronic data interchange systems. Through classroom and computer lab training students acquire the skills necessary to maintain the medical, legal, accreditation and regulatory requirements of the electronic health record and database; project management and fundamentals of change. Prerequisite: Electronic Health Records I.

Electroninc Health Records Specialist Capstone 170 hours
Work-based learning experience, project-based instruction and additional industry certifications will be utilized to reinforce skills obtained within any career major in the Business, Management and Administration cluster. Students will make final preparation for industry certifications and will finalize portfolios that highlight skills and certifications. Students may also undertake special projects, cross-train or participate in workplace learning opportunities to enhance skills in accordance with industry demands. Prerequisite: All other courses in career major.

Foundations for the Legal Office 180 hours
In this course students master the skills needed to use general software applications effectively in the work environment, to express themselves clearly and correctly with spoken and written language, and to learn general legal terminology and apply it correctly in appropriate settings. Prerequisite: Fundamentals of Technology.

Foundations of Medical Office/Medical Terminology 210 hours
In this course students prepare for a position as a medical office assistant, medical records technician, medical coder, or medical transcriptionist by gaining skills in medical anatomy and terminology as well as administrative routines and procedures followed in a medical office. The importance of complete accuracy and confidentiality in maintaining medical records is stressed. Additional areas emphasized in this course include preparation of patient records and medical data entry. Prerequisite: Fundamentals of Administrative Technologies.

ICD9-CPT Coding 180 hours
This course introduces the basic principles and conventions of the International Classification of Diseases (ICD) as well as Current Procedural Terminology (CPT) coding. Students simulate the application of coding principles with examples and exercises based on actual case documentation. Prerequisite: Medical Insurance, Patient Billing.

Legal Office Assistant Capstone 150 hours
Work-based learning experience, project-based instruction and additional industry certifications will be utilized to reinforce skills obtained within any career major in the Business, Management and Administration cluster. Students will make final preparation for industry certifications and will finalize portfolios that highlight skills and certifications. Students may also undertake special projects, cross-train or participate in workplace learning opportunities to enhance skills in accordance with industry demands. Prerequisite: All other courses in career major.

Legal Office Procedures 200 hours
In this course students master the soft skills, ethics and communication, and general administrative procedures and tasks necessary to be successfully employed in a legal office. This course provides students with the concepts, principles and attitudes needed to understand how an office is operated and managed in a rapidly changing global environment. Prerequisite: Foundations for the Legal Office.

Legal Receptionist Capstone 150 hours
Work-based learning experience, project-based instruction and additional industry certifications will be utilized to reinforce skills obtained within any career major in the Business, Management and Administration cluster. Students will make final preparation for industry certifications and will finalize portfolios that highlight skills and certifications. Students may also undertake special projects, cross-train or participate in workplace learning opportunities to enhance skills in accordance with industry demands. Prerequisite: All other courses in career major.

Legal Specialties 180 hours
In this course students learn the basics of how the court system works. They also study the nine basic categories of law and become familiar with the principles that guide them. Prerequisite: Advanced Computer Applications for the Law Office.
Medical Insurance 180 hours
In this course students learn the basic functions of processing medical insurance claims and handling cash-related accounting procedures. A computer-based training program guides students through the insurance claim form cycle and focuses on the areas in which medical office assistants encounter the greatest difficulties. Students are introduced to information about major insurance programs and federal health care legislation. Prerequisite: Patient Billing

Medical Insurance Coder Capstone 150 hours
Work-based learning experience, project-based instruction and additional industry certifications will be utilized to reinforce skills obtained within any career major in the Business, Management and Administration cluster. Students will make final preparation for industry certifications and will finalize portfolios that highlight skills and certifications. Students may also undertake special projects, cross-train or participate in workplace learning opportunities to enhance skills in accordance with industry demands. Prerequisite: All other courses in career major

Medical Office Assistant Capstone 150 hours
Work-based learning experience, project-based instruction and additional industry certifications will be utilized to reinforce skills obtained within any career major in the Business, Management and Administration cluster. Students will make final preparation for industry certifications and will finalize portfolios that highlight skills and certifications. Students may also undertake special projects, cross-train or participate in workplace learning opportunities to enhance skills in accordance with industry demands. Prerequisite: All other courses in career major

Office Administration & Management 150 hours
This course builds on the skills gained in the Fundamentals of Administrative Technologies courses and focuses on higher level content and strategies necessary to effectively engage students in technology and managerial skills needed for success in competitive business careers. This course is designed to enhance administrative support and management skills needed in the workplace. Prerequisite: Administrative Technologies II

Patient Billing 180 hours
This course provides an overview of medical office accounting procedures, introduces the features of a patient billing system, and presents important concepts relating to a medical office accounting function. Simulated practice using cutting-edge patient billing software allows the student to assume the role of a medical billing assistant in a doctor’s office. Prerequisite: Foundations of Medical Office Medical Terminology

Education and Training

Academic Commitment to Education (ACE) 120 hours
This course is structured around classroom lectures, activities and projects. The course also includes a component where the student is placed in teaching experiences within the school system and under the supervision of the supervising teacher and corresponding classroom teacher. The purpose is to provide a quality experience for the student-teacher and the younger students in which the student will interact. This course is aligned with ten of the fifteen Oklahoma Teaching Competencies (OTC) based on the Interstate New Teacher Assessment and Support Consortium (INTASC) principles.

Child Development Associate I 190 hours
This course will teach students how to handle health and safety requirements and emergencies. Students will learn good nutrition and guidance techniques. Students will also learn to provide care for infants and plan activities for children. Students will practice responding to scenarios that relate to children. Observation time will be a component of the course.

Child Development Associate II 190 hours
Students will create appropriate activities for specific developmental areas. Students will learn how to develop daily and weekly schedules, as well as practice responding to scenarios involving children and parents. Students will learn how to select books based on criteria and develop competency goals.

Classroom Management 120 hours
This course combines effective teaching skills and classroom management into one comprehensive course. It is designed to provide basic pedagogical tools necessary for creating effective teaching and learning environments. Students will be introduced to the current research on instructional approaches and strategies for teaching and learning in today’s classrooms. Students will be required to demonstrate these best practices within individual and small group experimental activities. Additionally, this course incorporates current research on the most effective strategies for improving classroom discipline, motivation, interpersonal relationships, and academic performance on all grade levels. Attention will be given to aspects of diversity and/or culture factors that influence perceptions about classroom management.

ELCCT 20 hours
This class provides students with the child care/day-care center training needed to provide quality care for young children. Learning activities stress the importance of the role of the caregiver in child care work.

Field Experience 75 hours
Students will observe classroom settings of various age levels throughout the school year. During extended field experience, students will work with small groups, prepare and present lessons and implement evaluations of activities while working under an experienced professional teacher.

Introduction to Computers and Applications-Paraprofessional 75 hours
This hands-on course provides students with a basic understanding of computers and their application. Students will be able to demonstrate on an introductory level the use of a computer operating system, an office suite and productivity tools as well as the Internet.

Introduction to Computers and Applications-Teacher Prep 45 hours
This hands-on course provides students with a basic understanding of computers and their application. Students will be able to demonstrate on an introductory level the use of a computer operating system, an office suite and productivity tools as well as the Internet.

Introduction to Secondary Education 120 hours
This course is designed to introduce Pre-Education students to the professional community of teachers, administrators, and support staff vital to the education of our nation’s youth and to the role school plays in society. This course initiates the process of developing a fundamental framework which allows students to become familiar with the culture of schools as they begin to assess their interest in the teaching profession.

Professional Development 45 hours
This course is designed for the development of leadership, personal development and employability skills attainment within the field of education.

School Based or Child Care Practicum 100 hours
Students will complete an internship that relates to being a paraprofessional or working with children. The internship will be planned to meet the student’s needs and will help the student broaden their educational experience

Special Needs Paraprofessional Training 25 hours
Students will learn the historical and legal foundations of special education, roles and responsibilities, ethical principles and professional conduct, HEP participation, disability awareness and learning strategies, planning, problem solving and communication, data collection and IEP progress monitoring, safe and healthy learning environments as well as behavior strategies.
Finance

**Accounting I  120 hours**
This course provides students with a strong foundation in generally accepted accounting principles and techniques needed for success in accounting careers or other business related fields. Prerequisite: Fundamentals of Technology, Fundamentals of Administrative Technologies, Administrative Technologies II

**Accounting II  120 hours**
This course provides students with a strong foundation in advanced accounting principles and techniques needed for success in accounting or other business related fields. Prerequisite: Accounting I

**Administrative Technologies II  120 hours**
This course builds on skills learned in the Fundamentals of Administrative Technology course and provides students with the ability to utilize, analyze and manipulate data through a database application. The integration of multiple applications builds critical thinking skills as students utilize the appropriate applications needed to complete case projects. Prerequisite: Fundamentals of Technology, Fundamentals of Administrative Technologies

**Banking and Financial Services  120 hours**
In this course, students learn the principles and practices of banking and credit in the United States. Students calculate math concepts needed in banking and credit and consider technological advances and their impact on the banking industry. Students engage in critical thinking exercises and “real business” problem solving in the modern practice of finance. They also gain skills needed to be a bank teller. Prerequisite: Fundamentals of Technology, Fundamentals of Administrative Technologies

**Banking Technologies  120 hours**
In this course, students build Word and Excel skills along with Outlook. They gain 10-key skills and learn to use a variety of office machines required in the bank industry. Prerequisite: Fundamentals of Technology

**Business, Financial Management & Accounting Capstone  165 hours**
Work-based learning experience, project-based instruction and additional industry certifications will be utilized to reinforce skills obtained within any career major in the Business, Management and Administration cluster. Students will make final preparation for industry certifications and will finalize portfolios that highlight skills and certifications. Students may also undertake special projects, cross-train or participate in workplace learning opportunities to enhance skills in accordance with industry demands. Prerequisite: All other courses in career major

---

**Computerized Accounting  120 hrs**
This course is designed to integrate accounting principles using computerized accounting system(s). Prerequisite: Accounting I, Accounting II

**Consumer Lending  120 hours**
In this course, students learn the principles of lending and the operations of lending department. They also learn to evaluate loan applications and to read financial statements and to analyze credit. Prerequisite: Math of Finance, Personal Finance

**Customer Relations  120 hours**
In this course, students learn the interpersonal and telephone skills needed to provide exceptional customer service in the banking industry. Students also learn the specifics of banking ethics, laws and regulations. Prerequisite: Fundamentals of Technology, Banking Technologies, Banking and Financial Services

**Financial Communications  120 hours**
In this course, students prepare letters, memos and reports focused on financial issues. In addition, students gain data base and presentation software skills. Prerequisite: Math of Finance, Personal Finance, Consumer Lending

**Financial Services Officer Capstone  120 hours**
Work-based learning experience, project-based instruction and additional industry certifications will be utilized to reinforce skills obtained within any career major in the Business, Management and Administration cluster. Students will make final preparation for industry certifications and will finalize portfolios that highlight skills and certifications. Students may also undertake special projects, cross-train or participate in workplace learning opportunities to enhance skills in accordance with industry demands. Prerequisite: All other courses in career major

**Fundamentals of Administrative Technologies  120 hours**
This course builds on the beginning business skills gained in the Fundamentals of Technology course and provides students with the concepts, principles, and ideas needed to understand how an office is operated and managed in a rapidly changing global environment. The integration of state-of-the-art personal computing is done throughout the course. Prerequisite: Fundamentals of Technology

**Fundamentals of Technology  120 hours**
In this course students learn the fundamental concepts, principles, and ideas needed to understand how business is operated and managed in a rapidly changing global environment. This course also provides job readiness skills and soft skills that are critical for success in any workplace setting.

**Math of Finance  120 hours**
This course provides knowledge of skill in mechanical computations of mathematics that apply to many aspects of business. Principles of mathematics are applied to real business examples to build student understanding of how to determine strategies and procedures for solving business situations. Prerequisite: Fundamentals of Technology, Fundamentals of Administrative Technologies

**Payroll Accounting  120 hours**
This course provides students with a strong foundation in payroll principles and techniques needed for success in accounting careers or other business-related fields. Prerequisite: Accounting I, Accounting II

**Personal Finance  120 hours**
In this course, students learn the principles of budgeting, borrowing, charge accounts, checking accounts, installment buying, insurance, savings, Social Security, home ownership, taxes, wills and estates. Prerequisite: Math of Finance
Health Science

Academic Life Skills 15 hours
This course is designed to provide adult students the foundation needed for success in school while preparing for certification or licensure in the chosen healthcare field. Topics of instruction include time management, resource management, study techniques, test taking skills, communication, cultural diversity, ethics and professionalism.

Administrative Medical Office Procedures 105 hours
Students will apply the basic concepts and principles of medical office practices and procedures with entry-level proficiency in the performance of duties in the administrative medical office. Prerequisite: Acceptance to the Medical Assistant major

Advanced Chairside Functions 26 hours
In this course students will prepare for expanded functions of the dental assistant in Coronal Polishing/Topical Fluoride and Pit and Fisher Sealants. Students will learn the legal and ethical roles as dental assistants for these expanded functions and how to perform these expanded functions. This course follows the guidelines for each advanced function as outlined in the rules and regulations set forth by the Board of Dentistry including clinical time. Prerequisite: Acceptance to the Dental Assistant Major

Advanced Imaging 48 hours
This course emphasizes advanced skills and specific career knowledge for the health care professional. To broaden their knowledge of primary radiographic procedures, the student will be involved in the exploration of specialized diagnostic and/or therapeutic procedures that may include, but is not limited to, the study of advanced imaging procedures and related associated imaging modalities, analysis of radiographic/sectional images, and evaluation of ethical dilemmas. Flexibility is built into this course to provide a means for program faculty to develop the specialized knowledge and skills that may be required of students at their specific geographical location. Prerequisite: Acceptance to the Radiologic Technologist major

Advanced Unlicensed Assistant 240 hours
The training program for Advanced Unlicensed Assistants (AUA) is designed to build on basic skills traditionally performed by nursing assistants. Selected advanced skills, legal and ethical aspects of health care and appropriate personal behaviors are presented in a format combining classroom lecture/discussion, demonstration/practice lab and clinical application. Graduates of an AUA training program are prepared to safely perform technical skills that are included on an approved skills list. Once the individual has completed the training, he/she applies for certification. The training is a minimum of 240 clock hours. Course hours are divided among the classroom, skills laboratory and clinical site. Prerequisite: Long Term Care or Basic Nursing Skills

Anatomy & Physiology 120 hours
Anatomy/Physiology is the study of the structural complexity of the human body and its intricate functional mechanisms. This course is taught as a laboratory science. Students will conduct scientific investigations and fieldwork using scientific knowledge and methodology that will enable them to make educated conclusions based on higher-level critical thinking and problem solving skills. The areas studied will be an integration of biology and chemistry and will include, but are not limited to: organization of the body, chemical basis for life, cells & tissues, integumentary system, skeletal system, muscular system, nervous system, endocrine system, blood, circulatory system, lymphatic & immune systems, respiratory systems, digestive system & metabolism, urinary system, and reproductive system. An emphasis should be placed on real-world applications, and active-learning exercises should be included along with laboratory experiences. Prerequisite: Algebra I, Geometry (co-enrollment), and Biology I (co-enrollment)

AP Biology 120 hours
AP Biology is designed to be the equivalent of a first year Biology post-secondary course. The range and depth of knowledge of the content area, type of labs, and time expenditure is elevated and extensive. Students will develop a conceptual framework for biology and an appreciation of science as a process. The course follows Collegeboard's outline and covers eight major themes. They are: Science as a Process, Evolution, Energy Transfer, Continuity and Change, Relationship of Structure to Function, Regulation, Interdependence in Nature, Science, Technology, and Society. Labs play an integral part of this course and there are twelve lab topics that will be covered. They will provide the student with an opportunity to learn a variety of skills and facts, principles, and concepts of biology. Lab investigations will encourage higher-order thinking, generating ideas, and formulating hypotheses. All students are expected to take the AP Exam upon completion of this course. Prerequisite: Biology I and Geometry

AP Calculus 120 hours
This course is primarily concerned with developing the students understanding of the concepts of calculus and providing experience with its methods and applications. Prerequisite: Pre-AP Trigonometry/Pre-Calculus

AP Environmental Science 120 hours
AP Environmental Science is a course that will provide students with the scientific principles, concepts, and methodologies required to understand the interrelationships of the natural world, to identify and analyze environmental problems both natural and human-made, to evaluate the relative risks associated with these problems, and to examine alternative solutions for resolving or preventing them. Environmental science is interdisciplinary; it embraces a wide variety of topics from different areas of study. Yet there are several major unifying constructs, or themes, that cut across the many topics included in the study of environmental science. Prerequisite: Biology I and Geometry

AP Statistics 120 hours
AP Statistics is a course that introduces students to the main concepts in statistics and enables them to collect, analyze, and draw a conclusion from data. The four main concepts are: Exploring Data, Sampling and Experimentation, Anticipating Patterns, and Statistical Inference. Students are expected to take the AP Statistics Exam upon completion of the course and could receive college credit with an acceptable score. AP Statistics follows AP Central's recommended course content. Prerequisite: Pre-AP Trigonometry/Pre-Calculus

Biomedical Innovation 120 hours
This capstone course gives student teams the opportunity to work with a mentor, identify a science research topic, conduct research, write a scientific paper, and defend team conclusions and recommendations to a panel of outside reviewers. Each team will have one or more mentors from the scientific and/ or medical community guiding their scientific research. Prerequisite: Medical Interventions

Basic Nursing Skills 91 hours
This course is designed to introduce students to basic nursing care for long term care patients. This course consists of 75 hours of didactic learning in which students will identify roles and responsibilities of a nurse assistant while learning basic care skills. The students will be able to identify normal and abnormal findings of basic skills. The course consists of at least 16 hours of long term clinical experience in which students will perform skills learned in the didactic portion of the course.
Health Science (continued)

Biomedical Sciences for the Dental Assistant 75 hours
The biomedical sciences course is designed to provide a basic understanding of body function and structure, concepts of diseases and dietary considerations for the student as well as the patient. Included areas of study are general anatomy and physiology, microbiology with the focus on dental worker and patient safety through the study of bloodborne pathogens and hazardous communications.
Prerequisite: Acceptance to the Dental Assistant Major

Career Preparation for Radiography 16 hours
This course emphasizes communication skills and specific career knowledge for the health care professional. To support an occupational job search, a functional resume will be produced that summarizes the student's education, personal and professional achievements and work experience. To enhance the student's professional images, each student will construct cover letters and thank you notes that may be updated or changed as needed. Advanced career modality requirements and preparation will be investigated, as well as the requirements for professional continuing education and opportunities for lifelong learning.
Prerequisite: Acceptance to the Radiologic Technologist major

Clinical I Basic Nursing 80 hours
Clinical I Basic Nursing focuses on the PN student providing comfort and assistance in performing activities of daily living for patients with common non-complicated disorders. Data collection skills will be practiced. The student will assist the client and significant others during the normal expected stages of growth and development. Experiences will be provided that will give the student opportunities to reduce the patient's potential for developing complications or health problems related to treatments, procedures or existing conditions. Students will identify patient problems, appropriate interventions and evaluate nursing care to patients in extended care facilities. Prerequisite: Acceptance to the Practical Nurse major, 1+1 Practical Nurse major, or Nursing Prep major

Clinical II Medical Surgical Nursing Part 1 168 hours
Clinical II Medical Surgical Nursing (Part I) focuses on the utilization of the nursing process in caring for acute care patients. The emphasis will be on prioritization, decision making, time management and critical thinking appropriate to the LPN's scope of practice. As the student progresses, more complex patient situations will be presented and they will begin to function in a role independent of the instructor. Rotations includes nursing care for patients with medical surgical problems, home health needs, geriatric nursing needs and conditions that requires visits to the medical office.
Prerequisite: Acceptance to the Practical Nurse major or 1+1 Practical Nurse major

Clinical III Medical Surgical Nursing Part 2 168 hours
Clinical III Medical Surgical Nursing (Part II) is a continuation of the utilization of the nursing process in caring for acute care patients. The student will care for multiple patients during this clinical rotation. The emphasis will be on prioritization, decision making, time management and critical thinking appropriate to the LPN's scope of practice. As the student progresses, more complex patient situations will be presented and they will begin to function in a role more independent of the instructor.
Prerequisite: Acceptance to the Practical Nurse major or 1+1 Practical Nurse major

Clinical IV Maternal/Newborn, Pediatric and Mental Health 104 hours
Clinical IV: The PN student will assist the patient and significant others during the normal expected stages of growth and development from conception throughout the life span. The PN student will provide patient care related to prevention and early detection of health problems involved in maternal/newborn, pediatric and mental health nursing.
Prerequisite: Acceptance to the Practical Nurse major or 1+1 Practical Nurse major

Clinical Practice for the Dental Assistant 336 hours
This course provides the student opportunity to practice dental skills learned in the classroom and laboratory setting in a professional dental clinic.
Prerequisite: Acceptance to the Dental Assistant major

Clinical Practice I 645 hours
Content and clinical practice experiences should be designed to sequentially develop, apply, critically analyze, integrate, synthesize and evaluate concepts and theories in the performance of radiologic procedures. Through structured, sequential, competency-based clinical assignments, concepts of team practice, patient-centered clinical practice and professional development are discussed, examined and evaluated. Prerequisite: Acceptance to the Radiologic Technologist major

Clinical Practice II 645 hours
Content and clinical practice experiences should be designed to sequentially develop, apply, critically analyze, integrate, synthesize and evaluate concepts and theories in the performance of radiologic procedures. Through structured, sequential, competency-based clinical assignments, concepts of team practice, patient-centered clinical practice and professional development are discussed, examined and evaluated. Prerequisite: Acceptance to the Radiologic Technologist major

Clinical Practice III 199 hours
This course contains content and clinical practice experiences designed to sequentially develop, apply, critically analyze, integrate, synthesize, and evaluate concepts and theories in the performance of radiologic procedures. Concepts of team practice, patient-centered clinical practice and professional development are discussed, examined, and evaluated. Practice experiences should be designed to provide patient care and assessment, competent performance of radiologic imaging procedures and total quality management. Levels of competency and outcomes measurement ensure the well being of the patient before, during, and following the radiologic procedure.
Prerequisite: Acceptance to the Radiologic Technologist major

Clinical Practice for the Physical Therapy Aide 60 hours
Students will practice skills performed by the physical therapy aide in the rehabilitative clinical environment. All student activities will be monitored by a Physical Therapist or Physical Therapy Assistant.

Clinical Procedures I 120 hours
The student will receive an overview of the Medical Assistant career. An emphasis will be placed on professionalism, history of the profession, human relations, OSHA guidelines, medical asepsis, vital signs, routine medical office procedures, emergency procedures, law, ethics, communication and documentation.
Prerequisite: Acceptance to the Medical Assistant major or focus

Clinical Procedures II 120 hours
The student will demonstrate an understanding of such skills as maintaining the examination area, performing clinical lab tests, venipuncture, microhematocrit and twelve lead electrocardiograph (ECG). An emphasis is placed on the patient's physical examination and treatment procedures that are performed in a medical office setting.
Prerequisite: Acceptance to the Medical Assistant major or focus

Clinical Sciences for the Dental Assistant 388 hours
The content of this course prepares the student to participate in laboratory and clinical experiences necessary to develop the skills to become a dental assistant. The course provides classroom and laboratory instruction. This course is broken into three smaller courses: Practice Management (36 hours); Clinical Sciences I (162 hours); and Clinical Sciences II (162 hours). Prerequisite: Acceptance to the Dental Assistant major
Health Science (continued)

Clinical V Transition to Practice 96 hours
Clinical V-Transition to Practice skills are enhanced as the student functions in the role of team leader. The course will prepare the student to independently assume the role of the LPN in professional practice; a preceptor rotation assists in the completion of this transition. Prerequisite: Acceptance to the Practical Nurse major or 1+1 Practical Nurse major

Comprehensive Program Review for Radiography 64 hours
This course provides a comprehensive review of the radiography curriculum in preparation for taking the certification exam given by The American Registry of Radiologic Technologists (ARRT). Identified areas of weakness will help the student focus on the curriculum items that need concentrated study. The computerized testing format of the ARRT exam will be emphasized. Prerequisite: Acceptance to the Radiologic Technologist major

Concepts of Nursing 40 hours
The Concepts of Nursing course focuses on the use of nursing related concepts by practical nurses as providers of care and members of the discipline in collaboration with health team members. Emphasis is placed on the concepts of learning, teamwork, communication in nursing, human development, professionalism, health promotion, nursing ethics and law, and changing health care delivery systems. Prerequisite: Acceptance to the Practical Nurse major, 1+1 Practical Nurse major, or Nursing Prep major

Core Employability Skills 30 hours
In this course students learn how employability skills enhance their employment opportunities and job satisfaction. Student are introduced to key employability skills and will learn the importance of maintaining and upgrading skills as needed. Prerequisite: Acceptance to the Surgical Technologist major

Dental Radiography 60 hours
Upon completion of this course, students have the skills necessary to successfully take, process and mount dental radiographs. The course emphasizes the safety precautions needed in radiography. Students will identify diagnostically acceptable radiographs.

Dental Sciences for the Dental Assistant 195 hours
This course provided the dental assisting student with in-depth knowledge regarding dental materials, oral anatomy, a familiarity of oral histology, oral embryology, pathology, pharmacology and head and neck anatomy. Prerequisite: Acceptance to the Dental Assistant major

Digital Image Acquisition and Display 64 hours
This course contains content designed to impart an understanding of the components, principles, and operation of digital imaging systems found in diagnostic radiology. Factors that impact image acquisition, display, archiving, and retrieval are discussed. The guidelines for selecting exposure factors and evaluating images within a digital system will assist students to bridge between film-based and digital imaging systems. Principles of digital system quality assurance and maintenance are presented. Prerequisite: Acceptance to the Radiologic Technologist major

Disaster and Emergency Preparedness 15 hours
This course includes these aspects of emergency preparedness and disaster training: preparation and planning, detection and communication, incident management and support systems, safety and security, clinical/public health assessment and intervention, contingency, continuity and recovery and public health law and ethics. This is a new course for surgical technology, however it could be offered in any career major. Prerequisite: Acceptance to the Surgical Technologist major

Essentials of Surgical Asepsis 60 hours
This course will introduce the student to the principles and practices of aseptic technique, scrubbing, gowning, gloving, sterilization and disinfection. Upon completion of this course, the student will be able to discuss and demonstrate the principles of aseptic technique. Prerequisite: Acceptance to the Surgical Technologist major

Ethics and Law in Radiologic Sciences 32 hours
Content is designed to provide a fundamental background in ethics. The historical and philosophical basis of ethics, as well as the elements of ethical behavior are discussed. The student will examine a variety of ethical issues and dilemmas found in clinical practice. An introduction to legal terminology, concepts, and principles will also be presented. Topics include misconduct, malpractice, legal and professional standards and the ASRT scope of practice. The importance of proper documentation and informed consent is emphasized. Prerequisite: Acceptance to the Radiologic Technologist major

Essentials of Physical Therapy Professionals 60 hours
This course will provide the student with a history of physical therapy. The course will present this occupation in the context of the rehabilitation team and emphasize how the contribution of the Physical Therapy Aide benefits the care of patients. The course explores the job opportunities that are available. Students will discuss licensure and certification for physical therapy professionals and legal/ethical issues in physical therapy. This course teaches the physical therapy aide basic skills needed to prepare a patient for treatment. Students will learn and skillfully perform a variety of transfer techniques frequently used in the clinical setting.

Foundations of Dental Assisting 30 hours
This course includes an overview of dental specialties including all the dental team members and a review of educational requirements, responsibilities, and job duties. Prerequisite: Acceptance to the Dental Assistant major

Fundamentals of Nursing 160 hours
The Fundamentals of Nursing course is an introduction to nursing care. Topics include utilizing the nursing process, performing assessment/data collection, and providing patient education. Principles and skills of nursing practice, documentation, and an introduction to physical assessment/data collection are taught. Special topics covering the care of the geriatric patient, the dying patient, the pre/post operative patient, and the management of pain are included in the course. Emphasis will be placed on developing critical thinking skills, demonstrating professionalism by maintaining confidentiality, recognizing legal/ethical responsibilities, acting as a patient advocate, maintaining positive patient/colleague relationships, and by implementing appropriate standards of care. Prerequisite: Acceptance to the Practical Nurse major, 1+1 Clinical V major, or Nursing Prep major

Health Careers Core Curriculum 225 hours
This course provides a core set of competencies that students need to for most health careers. Topics covered included: Effective Communication, Medical Math, Safety, IT applications, Legal and Ethical Principles and Practice, Teamwork, Health Promotion, Healthcare Delivery Systems, and Employability Skills
Health Science (continued)

Healthcare Provider CPR and First Aid 15 hours
This course will provide the most current guidelines for CPR developed by the American Heart Association. The student will receive training in Cardiopulmonary Resuscitation (CPR)/Automated External Defibrillator (AED)/Foreign Body Airway Obstruction (FBAO). The student will have an opportunity to become certified in Healthcare Provider CPR. This course will provide the knowledge for the student to perform basic first aid. Students will be provided an opportunity to gain skills towards first aide competency such as victim assessment, splinting, controlling bleeding, poisoning and burns.

Health Unit Clerk 120 hours
Students in this course will learn basic computer skills, basic transcription, customer service, verbal and nonverbal communication skills, proper telephone etiquette, and organizational skills that will prepare them for the diverse roll of the health unit clerk.

Human Body Systems 120 hours
The human body is a complex system requiring care and maintenance. This course will engage students in the study of basic human physiology, especially in relationship to human health. Students will use a variety of monitors to examine body systems (respiratory, circulatory, and nervous) at rest and under stress, and observe the interactions between the various body systems. Students will use LabView® software to design and build systems to monitor body functions.

Prerequisite: Principles of Biomedical Science

Image Analysis I 48 hours
Content is designed to provide a basis for analyzing radiographic images. Included are the importance of minimum imaging standards, discussion of a problem-solving technique for image evaluation, and the factors that can affect image quality. Actual images will be included for analysis. This course emphasizes the importance of identifying and evaluating diagnostic images. Guidance is given in the selection of accurate improvement methods. Knowledge and experience is also gained during the first year clinical evaluations with the instructor, and through routine image assessment during the Procedures course.

Prerequisite: Acceptance to the Radiologic Technologist major

Image Analysis II 48 hours
Content is designed to provide a basis for analyzing radiographic images. Included are the importance of minimum imaging standards, discussion of a problem-solving technique for image evaluation and the factors that can affect image quality. Actual images will be included for analysis.

Prerequisite: Acceptance to the Radiologic Technologist major

Imaging Equipment 72 hours
Content is designed to establish a knowledge base in radiographic, fluoroscopic, mobile and tomographic equipment requirements and design. The content also provides a basic knowledge of quality control.

Prerequisite: Acceptance to the Radiologic Technologist major

Introduction to Computed Tomography 32 hours
Content is designed to provide entry-level radiography students with the principles related to computed tomography (CT) scans.

Prerequisite: Acceptance to the Radiologic Technologist major

Introduction to Radiological Science and Health Care 48 hours
Content is designed to provide an overview of the foundations in radiography and the practitioner’s role in the healthcare delivery system. Principles, practices and policies of the healthcare organizations are examined and discussed in addition to the professional responsibilities of the radiographer.

Prerequisite: Acceptance to the Radiologic Technologist major

Introduction to Surgical Technology 30 hours
This course is designed to provide information introducing the student to the roles and responsibilities of the surgical team and the health care system. Students will explore the ethical and legal concepts and professional responsibilities of the surgical technology field.

Prerequisite: Acceptance to the Surgical Technologist major

Long Term Care Assistant 120 hours
This course meets requirements set by the Oklahoma State Dept. of Health for Long Term Care Nurse aide curriculum. Upon completion of this course, the student will be eligible to sit for the state certification exam.

Maternal/Newborn Nursing 40 hours
The Maternal Newborn Nursing course is designed to familiarize the student with the holistic approach to care for the antepartum, intrapartum, postpartum client and the neonate. The normal processes of conception, fetal development, labor and delivery, postpartum period, and family involvement will be included. The course includes the care of the normal client and newborn as well as those with complications.

Prerequisite: Acceptance to the Practical Nurse major or 1+1 Practical Nurse major

Medical Assisting Externship 171 hours
This course is designed to apply the knowledge and skills acquired in previous medical assistant courses to the clinical site. Externship assignments are scheduled to provide students with adjunct faculty and supervised experience in performing the skills and competencies of a medical assistant in a physician’s office. Students will accept accountability and responsibility for their own behavior while in the learning environment and will practice within the clinical and legal framework of the profession of medical assistant.

Prerequisite: Acceptance to the Medical Assistant major

Medical Assisting Simulation 90 hours
This course is designed to build upon previous knowledge from medical assistant courses. The student will apply critical thinking skills for medical assistants to include the process of planning, managing and delivering care to patients. During this course, the student will schedule, prepare and assist in the care of a group of virtual patients’ health care needs. An emphasis will be placed on communication skills in relation to patients and their families. The student will manage a simulated clinic including patient charts, inventories, billing, scheduling, insurance form preparation, coding and other administrative and clinical duties. A variety of teaching methods, learning activities, and computer research and practical simulations are utilized.

Prerequisite: Acceptance to the Medical Assistant major or focus

Medical Informatics 45 hours
The student will gain an understanding of the automated medical office by using a computerized medical office package. Included in this software package are billing, charge slips, scheduling, insurance form preparation and patient data storage. The student will demonstrate familiarity with methods and techniques used in literature research for medical professionals. The student will further be exposed to advanced Internet research.

Prerequisite: Acceptance to the Medical Assistant major

Medical Insurance and Coding 54 Hours
This course covers information necessary to understand medical insurance form preparation and coding as used in a medical clinical office. Students demonstrate an understanding of the legal issues of insurance claims, procedural & diagnostic
Consideration is also given to the impact on Maslow's Hierarchy of Needs. Patient care from a patient-centered approach based within each system. Content is presented in pharmacology, and diet therapy are included in the concepts of patient care; treatments, reproductive, as well as oncology nursing. The systems included are hematology, immunology, neurology, digestive, endocrine, and reproductive, as well as oncology nursing. The concepts of patient care, treatments, pharmacology, and diet therapy are included within each system. Content is presented from a patient-centered approach based on Maslow's Hierarchy of Needs. Patient care involves consideration of physiological, cognitive, psychosocial, and spiritual needs within a cultural framework. Consideration is also given to the impact on health issues: the potential physical and mental adjustments required, as well as any necessary diversional or rehabilitative activities. Prerequisite: Acceptance to the Practical Nurse major or 1+1 Practical Nurse major.

Medical Interventions 120 hours
Medical practice includes interventions to support humans in treating disease and maintaining health. Student projects will investigate various medical interventions that extend and improve quality of life, including gene therapy, pharmacology, surgery, prosthetics, rehabilitation, and supportive care. Students will study the design and development of various medical interventions including vascular stents, cochlear implants, and prosthetic limbs. They will review the history of organ transplants and gene therapy, and read current scientific literature to be aware of cutting edge developments.

Medical Law and Ethics 40 hours
This course covers information necessary to understand the legal and ethical standards of the medical assisting practice. Students will demonstrate a knowledge of ethical issues, contracts, healthcare worker liability, medical litigation, drug regulations, discrimination issues, OSHA rules, bioethical issues, medical records, acceptable fees, and laws that may affect the health care professional. Emphasis is placed upon the settings that employ medical assistants. Prerequisite: Acceptance to the Medical Assistant major or focus.

Medical Office Laboratory Procedures 55 hours
Students receive an overview of patient preparation, collection, handling, quality control and transporting of specimens for the most common CLIA (Clinical Laboratory Improvement Amendments) waived laboratory tests performed in a doctor’s office. Furthermore, students demonstrate how to complete medical laboratory request forms and laboratory/pathology reports. Prerequisite: Acceptance to the Medical Assistant major.

Medical Surgical Nursing I 99 hours
The Medical Surgical Nursing I course builds on concepts from previous courses, this course focuses on health management, maintenance and prevention of illness; care of the individual as a whole and deviations from the normal state of health. The administration of patient care includes using the nursing process, performing focused assessments, using critical thinking, and assisting with patient education. The systems included are integumentary, musculoskeletal, respiratory, cardiac, vascular, urinary and sensory. The concepts of patient care; treatments, pharmacology, and diet therapy are included within each system. Content is presented from a patient-centered approach based on Maslow’s Hierarchy of Needs. Patient care includes consideration of physiological, cognitive, psychosocial, and spiritual needs. Consideration is also given to the impact of health issues; the potential physical and mental adjustments as well as diversional and rehabilitative activities. Prerequisite: Acceptance to the Practical Nurse major or 1+1 Practical Nurse major.

Medical Surgical Nursing II 99 hours
The Medical Surgical Nursing II course builds on concepts from previous courses, this course focuses on health management, maintenance and prevention of illness; care for the individual as a whole; and deviations from the normal state of health. Administering patient care includes use of the nursing process while performing focused assessments, using sound judgment, and providing patient education. The systems included are hematology, immunology, neurology, digestive, endocrine, and reproductive, as well as oncology nursing. The concepts of patient care, treatments, pharmacology, and diet therapy are included within each system. Content is presented from a patient-centered approach based on Maslow’s Hierarchy of Needs. Patient care involves consideration of physiological, cognitive, psychosocial, and spiritual needs within a cultural framework. Consideration is also given to the impact on health issues: the potential physical and mental adjustments required, as well as any necessary diversional or rehabilitative activities. Prerequisite: Acceptance to the Practical Nurse major or 1+1 Practical Nurse major.

Medical Terminology 45 hours
Medical Terminology is designed to develop in the students a working knowledge of the language of medicine. Students acquire word building skills by learning prefixes, suffixes, roots and abbreviations. By relating terms to body systems, students identify proper uses of words in a medical environment. Knowledge of medical terminology enhances students’ ability to successfully secure employment or pursue advanced education in healthcare.

Mental Health Nursing 40 hours
This course presents an introduction to Mental Health Nursing with a focus on the role of the practical nurse. The course begins with universal concepts needed in the care of clients experiencing a mental health alteration. An understanding of the health care needs of clients experiencing common mental health alterations is then built upon this foundation. The course concludes with mental health issues, as well as care needs, that frequently challenge the elderly. Prerequisite: Acceptance to the Practical Nurse major or 1+1 Practical Nurse major.

Microbiology and Wound Healing 30 hours
This course is designed to provide the student with a basic background in microbiology. This course will provide a better understanding of the relationship between microorganisms and the maintenance of health and/or the prevention of disease.

Pharmacological Calculations 60 hours
Basics of pharmaceutical mathematics are covered to include reading, interpreting and solving calculation problems encountered in the preparation and distribution of drugs. Conversions of measurements, ratio and proportion, percentage, dilution and concentration, mill equivalents, units, intravenous flow rates, and solving dosage calculations.
Pharmacy 60 hours
The student will identify sources, schedules and classes of drugs. The student will identify and interpret actions of drugs commonly used in a physician's office, accurately calculate drug dosage and identify appropriate medication routes. The student will follow the written, verbal and standing physician orders and properly prepare and administer using aseptic technique as required. Prerequisite: Acceptance to the Medical Assistant major.

Pharmacy & Intravenous Therapy Skills 50 hours
This course provides instruction in basic pharmacology that is needed for safe and effective medication administration. Skills include medication administration as well as IV therapy. Fluid and electrolyte balance will be included. Content includes components of medication preparation and administration including the essential knowledge needed to adequately contribute to the assessment and evaluation of the effects of medication on clients throughout the lifespan. Prerequisite: Acceptance to the Practical Nurse major or 1+1 Practical Nurse major.

Pharmacology & Venipuncture 32 hours
Content is designed to provide basic concepts of pharmacology. The theory and practice of basic techniques of venipuncture and administration of diagnostic contrast agents and/or intravenous medications is included. The appropriate delivery of patient care during these procedures is emphasized. Prerequisite: Acceptance to the Radiologic Technologist major.

Pharmacology for PhT 75 hours
This course provides the student with an overview of the major categories of classifications of drugs. Emphasis is placed on actions of drugs in the human body as well as trade and generic names.

Pharmacy Law and Ethics 15 hours
Upon completion of this course, the student will comprehend state and federal laws and regulations regarding controlled substances, storage and dispensing of controlled substances. The agencies that regulate pharmacy practice will also be studied.

Pharmacy Technician Certification Preparation 30 hours
This course will prepare the student to take and pass the national Pharmacy Technician Certification exam. Students will be given the opportunity to reinforce learning of material covered in class and while on the job training.

Pharmacy Technician Internship 60 hours
This course provides students with work-based learning experiences. Students will practice under the supervision of a pharmacist or simulate the clinical experience in a laboratory setting.

Physical Therapy Aide Mentorship 60 hours
This course is a supervised practical experience. Students will practice skills performed by the physical therapy aide in the rehabilitative clinical environment. All student activities will be monitored by a Physical Therapist or Physical Therapy Assistant.

Pre-AP Algebra II 120 hours
This course will enhance and expand the mathematical foundations of Algebra I and Geometry. The course will stress the fundamental extension of previous mathematics and the preparation for future higher-level mathematics courses. It will involve operations with real and complex numbers as well as matrices. The problem solving processes will use functions and relations. Within the course applications of math, and while satisfying predictions based on a set of data, the use of data analysis, and statistics will be justified. Students who master Pre-AP Algebra II will gain experience with quadratic functions, conic sections, logarithmic and exponential functions, linear functions, solution methods for systems of linear functions, and

Pre-AP Chemistry 120 hours
Pre-AP Chemistry is designed to prepare students for the complex thinking that will be expected in future science courses. This course will focus on the development of the student as a scientist through the study of chemistry. Being a scientist requires a broad set of tools, including theory, problem solving, written and oral communication, interpreting data and laboratory skills. Areas covered are: Matter, atoms & periodic table, molecules & compounds, chemical reactions & stoichiometry, Aqueous solutions & reactions, Gases, Energy & Chemical Reactions, Atomic & Molecular Structure. Prerequisite: Pre-AP Geometry 120 hours

Pre-AP Geometry 120 hours
This course will allow students the chance to relate mathematics to real-life situations and careers. It will build logical reasoning capabilities as well as give students an opportunity to justify conclusions in a structured manner. Students will analyze characteristics and properties of two- and three-dimensional geometric shapes. They will use visualization, spatial reasoning, and geometric modeling to solve problems. Throughout the course students connect the algebra skills previously developed to the geometric concepts. Pre-AP Geometry is a rigorous course that prepares students for higher-level mathematics. Prerequisite: Algebra I

Pre-AP Trigonometry/Pre-Calculus 120 hours
This course is designed to be in preparation for Calculus or AP Calculus. A graphing calculator is recommended. The first part of the course includes a study of six basic functions of trigonometry, solutions of right and oblique triangles, identities, and complex numbers. The calculator is used as an aide to computations. The second half of the course gives a review study of straight lines, conic sections, simplification of equations, algebraic curves, transcendental curves, a completed study of straight lines, simplification of equations, polar coordinates, and an introduction to limits and derivatives. Prerequisite: Algebra II or Pre-AP Algebra II.

Principles of Biomedical Science 120 hours
This course provides an introduction to biomedical sciences through exciting “hands-on” projects and problems. Student work involves the study of human medicine, research processes and an introduction to bio-informatics. Students investigate the human body systems and various health conditions including heart disease, diabetes, sickle-cell disease, hypercholesterolemia, and infectious diseases. A theme through the course is to determine the factors that led to the death of a fictional person. After determining the factors responsible for the death, the students investigate lifestyle choices and medical treatments that might have prolonged the person’s life. Key biological concepts including: homeostasis, metabolism, inheritance of traits, feedback systems, and defense against disease are embedded in the curriculum. Engineering principles including: the design process, feedback loops, fluid dynamics, and the relationship of structure to function are incorporated in the curriculum where appropriate. The course is designed to provide an overview of all the courses in Biomedical Sciences and to lay the scientific foundation necessary for student success in the subsequent courses. Prerequisite: Algebra I, Geometry (or co-enrollment), and Biology I (or co-enrollment).

Principles of Imaging 60 hours
Content is designed to establish a knowledge base in factors that govern and influence producing and recording radiologic images. Film and electronic imaging with related accessories are emphasized. Class demonstrations/labs are used to demonstrate theory application. Prerequisite: Acceptance to the Radiologic Technologist major.

Professional Skills in the Pharmacy 15 hours
This course will prepare the student to meet the public in a pharmacy setting. The student will practice greeting customers, preparing prescriptions and instructing the customer on medication pickup. This course helps students develop employability skills necessary for success in the workplace, such as communication, personal responsibility and time management. Resume writing and practice job interviews will be conducted.
Radiation Biology 48 hours
Content is designed to provide an overview of the principles of interaction of radiation with living systems. Radiation effects on molecules, cells, tissues, and the body as a whole are presented. Factors affecting biological response are presented, including acute and chronic effects of radiation. Prerequisite: Acceptance to the Radiologic Technologist major

Radiation Production and Characteristics 48 hours
Content is designed to establish a basic knowledge of atomic structure and terminology. Also presented are the nature and characteristics of radiation, x-ray production, and the fundamentals of photon interactions with matter. Prerequisite: Acceptance to the Radiologic Technologist major

Radiation Protection 48 hours
Content is designed to present an overview of basic principles of radiation protection, including the responsibilities of the radiographer for patients, personnel, and the public. Radiation health and safety requirements of federal and state regulatory agencies, accreditation agencies, and health care organizations are incorporated. Prerequisite: Acceptance to the Radiologic Technologist major

Radiographic Pathology 32 hours
Content is designed to introduce theories of disease causation and the pathophysiologic responses of disease pathogenesis, clinical manifestations, radiographic appearance and management of alterations in body systems are presented. Prerequisite: Acceptance to the Radiologic Technologist major

Radiographic Procedures I 150 hours
Content is designed to provide the knowledge base necessary to perform standard radiographic procedures, including basic computed tomography (CT) and special studies. Consideration is given to the evaluation of optimal diagnostic images. Laboratory experience should complement the didactic portion. This course provides the student with theoretic concepts, terminology, and clinical application for routine positioning procedures. Students will be given an opportunity to demonstrate their knowledge and skill in performing the simulated exams, which will later become a basis for competency in the clinical practicum. Knowledge of anatomic structures and radiographic quality will be evaluated in classroom activities. Prerequisite: Acceptance to the Radiologic Technologist major

Radiographic Procedures II 150 hours
Content is designed to provide an advanced knowledge base necessary to perform standard radiographic procedures, including basic computed tomography (CT) and special studies. Consideration is given to the evaluation of optimal diagnostic images. Laboratory experience should complement the didactic portion. This course provides the student with theoretic concepts, terminology, and clinical application for routine positioning procedures. Students will be given an opportunity to demonstrate their knowledge and skill in performing the simulated exams, which will later become a basis for competency in the clinical practicum. Knowledge of anatomic structures and radiographic quality will be evaluated in classroom activities. Prerequisite: Acceptance to the Radiologic Technologist major

Surgical Procedures II 75 hours
This course is designed to provide instruction in basic, intermediate and advanced specialty procedures outlined in the Core Curriculum for Surgical Technologists by the Association of Surgical Technologists. The student should be able to apply and demonstrate the concepts related to each of the following surgical procedures: Neurosurgery, Cardiothoracic, Peripheral Vascular, Oral, Maxillofacial, Plastic and Ophthalmic Surgery. Prerequisite: Acceptance to the Surgical Technologist major

Surgical Procedures I 90 hours
This course is designed to provide instruction in basic, intermediate and advanced core procedures outlined in the Core Curriculum for Surgical Technologists by the Association of Surgical Technologists. The student will be able to apply and demonstrate the concepts related to the following surgical procedures:

Surgical Procedures II 75 hours
This course is designed to provide instruction in basic, intermediate and advanced specialty procedures outlined in the Core Curriculum for Surgical Technologists by the Association of Surgical Technologists. The student should be able to apply and demonstrate the concepts related to each of the following surgical procedures: Neurosurgery, Cardiothoracic, Peripheral Vascular, Oral, Maxillofacial, Plastic and Ophthalmic Surgery. Prerequisite: Acceptance to the Surgical Technologist major

Surgical Tech Practicum I 30 hours
This course provides practical experiences in the laboratory setting or clinical environment. Prerequisite: Acceptance to the Surgical Technologist major

Surgical Tech Practicum II 240 hours
This course provides clinical experience in the surgical environment. The student assumes responsibility as the first scrub role, handling instruments and supplies and equipment necessary for the surgical procedure. Emphasis is placed on core surgical procedures. Prerequisite: Acceptance to the Surgical Technologist major

Surgical Tech Practicum III 240 hours
This course provides advanced clinical experience in the surgical environment with minimal assistance. Emphasis is on specialty surgical procedures. Students will prepare for and complete the national certification exam. Prerequisite: Acceptance to the Surgical Technologist major

Surgical Technology Orientation 15 hours
Surgical Technology Orientation includes the basic safety concepts, individual learning styles, introduction to information technology and review of the surgical technology handbook. Prerequisite: Acceptance to the Surgical Technologist major

Therapeutic Modalities for the Physical Therapy Aide 30 hours
This course will enable students to understand the physiological effects, indications, contraindications and safety of the use of therapeutic modalities. The student will be able to provide basic patient care; understand various types of exercises and their functions in patient education; the use of range of motion; strengthening and proprioceptive exercises for major areas of the body.
### Therapeutic Rehabilitation for the Physical Therapy Aide 30 hours
This course prepares the physical therapy aide to assist patients in performing therapeutic exercises. Students learn the proper techniques needed for client safety and comfort. This course prepares the physical therapy aide to assist with ambulation and gait training. Students learn safe practices while demonstrating competency in ambulating the client. This course teaches the physical therapy aide basic skills needed to prepare a patient for treatment. Students will learn and skillfully perform a variety of transfer techniques frequently used in the clinical setting.

### Transition to Practice 54 hours
The Transition to Practice course is designed to provide concepts to be discussed in relation to the transition from student to Licensed Practical Nurse. Beginning organization and management skills are included. The student will participate in job readiness skills. Prerequisite: Acceptance to the Practical Nurse major or 1+1 Practical Nurse major

### Hospitality & Tourism

#### Bake Shop Principles 60 hours
This course teaches the student the terms and equipment that will be used in baking. They will also learn the various types of mixing methods.

#### Baker Assistant Practicum 200 hours
In this course, the student will experience a basic internship. This course will allow the students to apply baking skills and techniques learned in an internal practice. Prerequisite: Culinary Assistant Major

#### Basic Baking Skills 235 hours
In this course, the student will learn baking skill techniques. They will gain knowledge about grains and grain processing. They will learn to make quick breads, yeast breads and rolls, sweet dough, as well as decorated cakes. Prerequisite: Culinary Assistant Major

#### Basic Kitchen Skills/Safety and Sanitation 135 hours
Students will be able to define and demonstrate basic kitchen and cooking skills, prepare foods in quantity and follow safety and sanitation practices. The selection and use of utensils, defining kitchen staples and proper cooking methods is taught.

#### Breakfast Foods 30 Hours
In this course students will learn to select and prepare breakfast foods and beverages.

### Caterer Practicum 300 hours
The students will gain practical lab experience in the area of soups, vegetables, salad dressings, sandwiches, as well as breakfast preparation. Students will advance their culinary skills as they have hands-on experience in preparing stocks and sauces, cooking meats, poultry, fish, and shellfish. Experience will also be gained as the students prepare salads, hors d’oeuvres, and garnishes. Prerequisite: Culinary Assistant Major

### Cost Control & Revenue Management 100 hours
Course presents effective methods and principles for purchasing and cost control in food service. Students will learn how to accurately price goods and services, control costs, and maximize profits at all types of restaurants and food service businesses. Prerequisite: Culinary Assistant Major

### Culinary Advanced Skills 120 hours
This theory/lab class will introduce the students to the identification and preparation of meat, poultry and seafood. It also introduces bakery skills and dessert/plate presentation. Stocks, soups and sauces will also be covered. An overview of manager is presented.

### Culinary Arts Capstone 120 hours
This course will include a specialized internship component in the area of interest in culinary arts.

### Culinary Arts Internship I 100 hours
This is a work-based learning experience in which a three-way partnership is established between the school, an employer or business, and the student for the purpose of providing practical education to the student through productive work opportunities. Experiences take place in a workplace setting and offer teachers and students the opportunity to see a relationship between school courses and career choices.

### Culinary Arts Practicum II 150 hours
The students will gain practical lab experience preparing stocks and sauces, cooking meats, poultry, fish, shellfish, salads, hors d’oeuvres, and garnishes.

### Culinary Basic Skills 120 hours
This course is an introduction to the history of food service and kitchen fundamentals such as safety, sanitation, kitchen equipment and kitchen basics. Nutrition as it relates to food preparation is covered. Students learn preparation and quantity food production skills in breakfast foods, sandwiches, salads, garnishes, fruits, vegetables, potatoes and grains. Students will also learn proper terminology and use of equipment applicable to the preparation of these foods. The importance of teamwork in the food service environment is also emphasized.

### Culinary Intermediate Skills 80 hours
Upon completion of this course, the student will be able to identify and prepare grains, legumes, and pasta; breakfast foods and beverages; and sandwiches, appetizers and hors d’oeuvres.

### Desserts 30 hours
In this course students will learn to identify and prepare the various types of desserts such as chocolates, custards, cookies, cakes and pies.

### Dining Room Management 120 hours
This course will help students learn and apply the service skills and techniques essential to the front of the house operations. Students will learn the importance of internal/external communication skills that include: handling special situations and customer needs as well as menu design.

### FACS Ed Capstone 120 hours
This course will allow students to demonstrate the project management skills and strategies they have learned throughout their academic career. Each student will be required to identify a project that impacts a community and develop the project from inception to implementation. In this context community can be defined as a school group, classroom, church, community, town, city, etc.

### Food Service & Sanitation 60 hours
A study of the principles of bacteriology, food borne illness, sanitation, safety, personal hygiene, housekeeping, health regulations and inspections affecting the professional food service and hospitality industries. The safe use, cleaning and maintenance of equipment is also stressed. The principles of the Hazard Analysis Critical Control Point program (HACCP) will also be studied including the use of Material Safety Data Sheets (MSDS) to identify chemical hazards. Emphasis in the course is placed on the theory and practice of food safety and sanitation.

### Food Service Management 200 hours
In this course, the student will learn and develop skills that will help them in problem-solving, communication, and planning. Prerequisite: Culinary Assistant Major

### Garde Manger for the Culinary Hospitality Assistant 65 hours
This course will introduce students to the art and craft of the cold kitchen. Students will learn the different ways to creatively express their talents through food and presentations. This class will offer them a chance to become an artist and display their personality through their food creations.

### Hospitality Business Management 60 hours
This course includes experience in a lab/store setting where students will have hands on experiences in counting change and operating the cash register. Students will also learn how to package food take out products.
Introduction to Hospitality & Tourism 60 hours
This is a core course designed to give students an overview of careers in the hospitality and tourism industry. Guest speakers and tours to hospitality and tourism facilities are included in this course. Areas of study include food service, lodging, travel and tourism, recreation, and attractions.

Knives and Smallware 40 hours
In this course, the student will learn about knives and basic cutting techniques. The student will also learn how to select hand tools and cookware.

Knives for Food Prep 15 hours
This course helps the students learn to identify parts of a knife. Students will practice the use of and different knife cuts as well as how to maintain knives.

Nutrition 100 hours
The basic concepts and science of nutrition and nutritional cooking are explored in detail including the descriptions and uses for vitamins, minerals, fats, carbohydrates, proteins, phytochemicals, flavonoids and anti-oxidants for human health and fitness. The concepts of health and nutrition, nutrient retention, nutritional cooking techniques, nutritional menu planning and other nutritional concepts applied to professional cooking are fully explored. Prerequisite: Culinary Assistant Major

Pastry & Baking for the Chef 100 hours
This course emphasizes the basic formulas, fundamentals and procedures, proper terminology, equipment and utensils. Additional emphasis will be placed on production of pies, cakes, variety breads, fillings, sweet dough and dessert specialty items.

Restaurant Manager Practicum III 100 hours
In this course, the student will experience a basic internship. This course will allow the students to apply skills learned in an external internship. Prerequisite: Culinary Assistant Major

Restaurant Manager Practicum IV 100 hours
In this course, the student will experience an internship. This course will allow the students to apply skills learned in an additional external internship. Prerequisite: Culinary Assistant Major

Safe Beverage Services 30 hours
This course helps the student learn the fundamentals need to provide responsible alcohol service. Students will learn the steps they must follow in order to follow the law.

Skill Assessment 30 hours
Upon completion of this course students will be tested on their ability to perform skills they have learned throughout the semester. Students are tested prior to graduation to assess their ability to perform to the same standard they were taught during the instructional period.

Specialty Desserts & Chocolate 40 hours
In this course, the student will learn skill techniques that are used in preparing specialty desserts such as ice creams, frozen desserts and creams as well as the use of fruits in desserts. Students will learn how to make various chocolate candies as well as learn how to use chocolate in decorating. Prerequisite: Culinary Assistant Major

Supervision & Stewarding 170 hours
The student will focus on human resource management and the supervision and leadership skills necessary to attract, train and retain a quality oriented hospitality/ culinary staff. Emphasis will be placed on proper communication skills, dealing with diversity, and managing a quality work environment. Prerequisite: Culinary Assistant Major

Workforce Staging 30 hours
This course is designed to be delivered as an integrated component within the courses taken by the individual student. The course is designed for the development of leadership, personal development and employability skills.

Yeast Breads, Rolls and Pastries 50 hours
This course emphasizes bakeshop ingredients and their functions, the use of equipment, and formulas used in the bakeshop. Additional emphasis will be placed on yeast dough, dough-mixing method, dividing and pre shaping dough, baking breads and pastries and evaluating their quality.

Human Services.

Artificial Nails 160 hours
This course teaches students techniques in applying artificial tips, nail wraps, and extensions. This will involve application of fiberglass, acrylic, sculptured and gel nails. Students will learn techniques in applying gems, foils, striping tape, appliqués, freehand paint application, and airbrushing.

Child Guidance, Behavior & Classroom Management 50 Hours
This course will allow students to gain knowledge in guidance theories, positive strategies that will enhance their understanding of the child guidance process by utilizing different care giving styles, specific positive discipline strategies and managing the physical environment effectively.

Cognitive/Social Skills 100 Hours
This course will give opportunities for students to learn cognitive and social needs of children birth to 8 years while focusing on appropriate experiences while creating a positive learning environment.

Cosmetology Laws, Rules & Regulations 40 hours
This course allows students to develop an understanding of the Oklahoma State Board Laws, Rules and Regulations. Students will focus on professional ethics, contamination control methods and licensure requirements as well as sanitation and safety standards.

Course Outline & Development 330 hours
This course provides introduction to lesson planning, development of lesson plans, and four-step teaching plan as well as teaching techniques, teaching aids, and developing, administering, and grading examinations. Prerequisite: Cosmetologist or Nail Technician or Esthetician

Creative Arts 80 Hours
This course is designed for students to focus on creativity, play and motor development while designing appropriate experiences for children birth to 8 years.
Hair Coloring 120 hours
This course reviews lifting natural hair color pigment and adding color to the hair. The course will also address how to correct hair color problems with preventative and corrective methods.

Hair Coloring-Public 90 hours
This course reviews lifting natural hair color pigment and adding color to the hair. The course will also address how to correct hair color problems with preventative and corrective methods.

Hair Texture Chemical Restructuring Public 180 hours
The basic hair re-structuring principles are addressed in the course. Students will learn to straighten, permanent wave and soft curl perm.

Haircutting-Public 180 hours
This course reviews identification and use of hair cutting implements, sectioning the hair, and applying various cutting and shaping techniques. The course teaches students to use a razor and scissors. Students apply the haircutting/shaping techniques.

Haircutting-Public 120 hours
This course reviews identification and use of hair cutting implements, sectioning the hair, and applying various cutting and shaping techniques. The course teaches students to use a razor and scissors. Students apply the haircutting/shaping techniques.

Hairstyling 390 hours
This course reviews and applies the basic principles of hair styling and parting techniques. Students will also learn to shape, style and set artificial hair.

Hairstyling Public 180 hours
This course reviews and applies the basic principles of hair styling and parting techniques. Students will also learn to shape, style and set artificial hair.

Infant and Toddler Care 140 hours
This course is designed for students that have completed Teacher Assistant and Master Teacher courses. The course is aligned with Oklahoma Career Tech duty/task lists for early childhood care and education occupations. This in-depth study is designed to provide training in the following areas: Ensuring a Safe and Healthy Environment, Understanding Infant and Toddler Development, Developing Relationships with Families, and Managing a Child Care Program. Prerequisite: Teacher Assistant and Master Teacher

Facials-Esthetician 200 hours
This course teaches students how to cleanse, tone, exfoliate, and massage the skin as well as apply makeup. Students will learn facials with and without facial equipment. Students will also learn skin structure as it relates to the cosmetology field. The course will also address the skin and its disorders

Facial Sciences: Histology, Dermatology & Physiology of the Skin 180 hours
This course addresses skin and its disorders, as well as the human anatomy. Students will learn massage manipulations and how to correctly use electricity and electrical equipment used in providing facials. Students will also focus on the importance of nutrition and its effect on the skin as well as facial product ingredients used on skin.

Facials-Introduction to Esthetician Technology 80 hours
This course provides an overview of the field of cosmetology-bacteriology, sterilization, sanitation, and safety. Students learn the skills needed to operate a safe salon as well as learn ways to prevent the spread of bacteria. Students focus on the basics of bacteriology, sterilization and sanitation as they learn to identify bacteria, infections, and the appropriate prevention. Students in cosmetology will also learn how to shampoo as well as develop an understanding of scalp treatments.

Facials-Esthetician 200 hours
This course teaches students how to cleanse, tone, exfoliate, and massage the skin as well as apply makeup. Students will learn facials with and without facial equipment. Students will also learn skin structure as it relates to the cosmetology field. The course will also address the skin and its disorders

Facial Sciences: Histology, Dermatology & Physiology of the Skin 180 hours
This course addresses skin and its disorders, as well as the human anatomy. Students will learn massage manipulations and how to correctly use electricity and electrical equipment used in providing facials. Students will also focus on the importance of nutrition and its effect on the skin as well as facial product ingredients used on skin.

Human Services (continued)

Early Care & Education Infant and Toddler Care 140 hours
This course is aligned with Oklahoma Career Tech duty/task lists for early childhood care and education occupations. This in-depth study is designed to provide training in the following areas: Ensuring a Safe and Healthy Environment, Understanding Infant and Toddler Development, Developing Relationships with Families, and Managing a Child Care Program. Prerequisite: Teacher Assistant and Master Teacher

Facials-Esthetician 200 hours
This course teaches students how to cleanse, tone, exfoliate, and massage the skin as well as apply makeup. Students will learn facials with and without facial equipment. Students will also learn skin structure as it relates to the cosmetology field. The course will also address the skin and its disorders

Facial Sciences: Histology, Dermatology & Physiology of the Skin 180 hours
This course addresses skin and its disorders, as well as the human anatomy. Students will learn massage manipulations and how to correctly use electricity and electrical equipment used in providing facials. Students will also focus on the importance of nutrition and its effect on the skin as well as facial product ingredients used on skin.

Hair Coloring 120 hours
This course reviews lifting natural hair color pigment and adding color to the hair. The course will also address how to correct hair color problems with preventative and corrective methods.

Hair Texture Chemical Restructuring 240 hours
The basic hair re-structuring principles are addressed in the course. Students will learn to straighten, permanent wave and soft curl perm.

Hair Texture Chemical Restructuring-Public 180 hours
The basic hair re-structuring principles are addressed in the course. Students will learn to straighten, permanent wave and soft curl perm.

Haircutting 180 hours
This course reviews identification and use of hair cutting implements, sectioning the hair, and applying various cutting and shaping techniques. The course teaches students to use a razor and scissors. Students apply the haircutting/shaping techniques.

Haircutting-Public 120 hours
This course reviews identification and use of hair cutting implements, sectioning the hair, and applying various cutting and shaping techniques. The course teaches students to use a razor and scissors. Students apply the haircutting/shaping techniques.

Haircutting-Public 120 hours
This course reviews identification and use of hair cutting implements, sectioning the hair, and applying various cutting and shaping techniques. The course teaches students to use a razor and scissors. Students apply the haircutting/shaping techniques.

Hairstyling 390 hours
This course reviews and applies the basic principles of hair styling and parting techniques. Students will also learn to shape, style and set artificial hair.

Hairstyling Public 180 hours
This course reviews and applies the basic principles of hair styling and parting techniques. Students will also learn to shape, style and set artificial hair.

Infant and Toddler Care 140 hours
This course is designed for students that have completed Teacher Assistant and Master Teacher courses. The course is aligned with Oklahoma Career Tech duty/task lists for early childhood care and education occupations. This in-depth study is designed to provide training in the following areas: Ensuring a Safe and Healthy Environment, Understanding Infant and Toddler Development, Developing Relationships with Families, and Managing a Child Care Program. Prerequisite: Teacher Assistant and Master Teacher

Intro to Child Development 75 Hours
This course is designed to assist students in gaining an understanding of direct and indirect guidance techniques to be used with young children. The course combines classroom instruction with lab experience and observation to develop competence in working with young children. The course will allow students the opportunity to experience firsthand what it is like to guide children's behavior through direct and indirect methods.

Introduction to Esthetician Technology 80 hours
This course provides an overview of the field of cosmetology-bacteriology, sterilization, sanitation, and safety. Students will learn the skills needed to operate a safe salon as well as learn ways to prevent the spread of bacteria. Students focus on the basics of bacteriology, sterilization and sanitation as they learn to identify bacteria, infections, and the appropriate prevention.

Introduction to Nail Technology 40 hours
This course provides an overview of the field of cosmetology-bacteriology, sterilization, sanitation, and safety. Students will learn the skills needed to operate a safe salon as well as learn ways to prevent the spread of bacteria. Students will focus on the basics of bacteriology, sterilization and sanitation as they learn to identify bacteria, infections, and the appropriate prevention.
Human Services (continued)

Intro to Nutrition, Health & Safety 135 Hours
This course provides a basic understanding of strategies to develop children and to keep them safe and healthy. The course combines classroom instruction with lab experience and observation to develop competence in maintaining a safe and healthy learning environment for children. The course will allow students the opportunity to experience firsthand how to maintain safety and health regulations and to provide nutritious meals and snacks.

Introduction to Teaching 120 hours
This course defines the function of a teacher and teacher maturity. Prerequisite: Cosmetologist or Nail Technician or Esthetician

Lash & Brow Tinting & Arching 30 hours
This course addresses how to perform hair removal as well as shape brows. The course will also provide students experience in waxing.

Law, Beauty School Management, and Record Keeping 90 hours
This course teaches the fundamentals of inventory, ordering supplies, and keeping attendance. Prerequisite: Cosmetologist or Nail Technician or Esthetician

Make-up/Facials-Cosmetologist 30 hours
This course teaches students how to cleanse, tone, exfoliate, and massage the skin as well as apply makeup. Students will learn facials with and without facial equipment. Students will also learn skin structure as it relates to the cosmetology field. The course will also address the skin and its disorders.

Manicures-Nail 80 hours
Students learn the basic fundamentals of performing manicuring services. This includes terms, supplies, equipment, setting up for manicure, filing nails, trimming cuticles, massaging and polishing nails as well as the learning the proper use of emery boards, cuticle pushers and cuticle nippers.

Manicure/Pedicure/Artificial Nails-Cosmetologist 90 hours
In this course, students review proper selection and use of equipment, implements, cosmetics and materials in giving a plain manicure and pedicure. Students will apply various manicuring and pedicuring techniques. Students learn techniques in applying artificial tips, nail wraps, and extensions. This will involve application of fiberglass, acrylic, sculptured and gel nails.

Manicure/Pedicure/Artificial Nails-Cosmetologist-Public 60 hours
In this course, students review proper selection and use of equipment, implements, cosmetics and materials in giving a plain manicure and pedicure. Students will apply various manicuring and pedicuring techniques. Students learn techniques in applying artificial tips, nail wraps, and extensions. This will involve application of fiberglass, acrylic, sculptured and gel nails.

Nail Art 60 hours
This course teaches students techniques in applying gels, foils, striping tape, appliqués, freehand pain application and airbrushing.

Nail Structure: Composition, Disorders, Diseases 60 hours
This course teaches students skin and nail composition, as well as the disorders, and diseases of the nails and skin. Students will learn the functions of cells, tissues, organs and systems of the body, parts of the nail and how to identify nail diseases. This course will also address what students can work on and what to refer to a physician.

Non-Permanent Hair Removal-Esthetician 40 hours
This course addresses how to perform hair removal as well as shape brows. The course will also provide students experience in waxing. Students will also learn skin structure as it relates to the cosmetology field. The course will also address the skin and its disorders.

Observation & Training I 110 hours
The course allows students firsthand experiences in the classroom observing and participating in lab experiences to develop competence in working with young children.

Observation & Training II 115 hours
The course allows students firsthand experiences in the classroom observing and participating in lab experiences to develop competence in working with young children.

Orientation & Review of Cosmetology Curriculum 60 hours
This course includes licensure prerequisite, an introduction to the fundamentals of instruction of students, and a general review of curriculum. Prerequisite: Cosmetologist or Nail Technician or Esthetician

Parent, Community & Program Planning I 50 Hours
This course allows students to explore methods of effectively interacting with families. Students will learn practical application of developing child centered curriculum as well as effective program planning.

Parent, Community & Program Planning II 105 Hours
This course allows students to explore methods of effectively interacting with families. Students will learn practical application of developing child centered curriculum as well as effective program planning.

Pedicures-Nail 80 hours
Students learn the basic fundamentals of performing a pedicuring service. This includes terms, supplies, equipment, setting up for pedicure, filing toe nails, trimming cuticles, massaging, reflexology, and polishing toe nails.

Practice Teaching in the Classroom & Clinic 250 hours
The student will complete practice teaching (classroom and clinic). Prerequisite: Cosmetologist or Nail Technician or Esthetician

Professional Development I 95 Hours
This course is designed for the development of leadership, personal development and employability skills within the field of education.

Professional Development II 75 Hours
This course is designed for the development of leadership, personal development and employability skills within the field of education.

Salon Development-Cosmetologist 180 hours
This course will allow students the opportunity to design a salon, plus implement customer service skills that they have learned.

Salon Development Cosmetologist-Public 100 hours
This course will allow students the opportunity to design a salon, plus implement customer service skills that they have learned.

Salon Development-Esthetician 60 hours
This course will allow students the opportunity to design a salon, plus implement customer service skills that they have learned.

Salon Development-Nail Technician 80 hours
This course will allow students the opportunity to design a salon, plus implement customer service skills that they have learned.

Scalp Treatments 30 hours
This course includes preparation of the patron, analyzing scalp and hair conditions, proper brushing techniques, selection of shampoos, rinses and scalp treatments, and application of basic scalp care and manipulation techniques.
Human Services (continued)

Scalp Treatments-Public 30 hours
This course includes preparation of the patron, analyzing scalp and hair conditions, proper brushing techniques, selection of shampoos, rinses and scalp treatments, and application of basic scalp care and manipulation techniques.

Shampoo/Conditioning/Rinses 60 hours
This course teaches students to analyze and cleanse the hair and scalp. Students will also gain skills in draping clients as well as selecting shampoo products. Students will also focus on how to give a scalp massage and shampoo.

Shampoo/Conditioning/Rinses-Public 30 hours
This course teaches students to analyze and cleanse the hair and scalp. Students will also gain skills in draping clients as well as selecting shampoo products. Students will also focus on how to give a scalp massage and shampoo.

Teaching & Assisting in the Classroom & Clinic 150 hours
This course teaches the laws of learning, understanding the classroom atmosphere and student learning. Prerequisite: Cosmetologist or Nail Technician or Esthetician

Information Technology

Client Operating Systems 120 hours
Students perform desktop client administration and maintenance and provide support for users in various work environments, including professional offices, small businesses, work groups, departments, and/or corporate information services. Prerequisite: Network and Routing Fundamentals

Computer Repair and Troubleshooting I 180 hours
This course prepares students for the CompTIA A+ IT Essentials certification exam. Students prepare for positions related to the maintenance of computers and computer-related equipment through hands-on and project-based learning, textbook assignments, and Internet research. This course focuses on computer hardware, troubleshooting, repair and maintenance, operating systems and software, networking and security. The course also includes the communication skills and professionalism required of entry-level IT professional. Prerequisite: Fundamentals of Technology

Fundamentals of Technology 120 hours
This course builds on the beginning business skills gained in the Fundamentals of Technology course and provides students with the concepts, principles, and attitudes needed to understand how an office is operated and managed in a rapidly changing global environment. The integration of state-of-the-art personal computing is done throughout the course. Prerequisite: Fundamentals of Technology

Information Support and Services Capstone 150 hours
Work-based learning experience, project-based instruction and additional industry certifications are utilized in this course to reinforce skills obtained within any Information Technology Career Major. Students make final preparations for industry certifications as they master outlined competencies. Students select from various project options to finalize portfolios that highlight skills and certifications. Students may also undertake special projects, cross-train or participate in workplace learning opportunities to enhance skills in accordance with industry demands. Prerequisite: All other required courses in career major

Installing and Maintaining Desktop Applications 120 hours
Students perform network administration duties and provide support for network users in various work environments, including professional offices, small businesses, work groups, departments, and/or corporate information services. Prerequisite: Client Operating Systems

Medical Insurance 180 hours
In this course students learn the basic functions of processing medical insurance claims and handling cash-related accounting procedures. A computer-based training program guides students through the insurance claim form cycle and focuses on the areas in which medical office assistants encounter the greatest difficulties. Students are introduced to information about major insurance programs and federal health care legislation. Prerequisite: Patient Billing

Network and Routing Fundamentals 150 hours
Students prepare for positions related to the installation, configuration, and troubleshooting of network hardware peripherals and protocols. Students learn the basics of networking by exploring the OSI model, network topologies, cabling techniques, network communications protocols, and hardware. Prerequisite: Fundamentals of Technology, Computer Repair & Troubleshooting I & II or A+ Certification.

Network Management I 120 hours
Students perform a variety of network support skills necessary to keep a company’s network running efficiently—with file and print services. Students solve advanced company-wide support problems and high-level network problems. Additionally, students perform planning, installation, configuration, troubleshooting and upgrade services for networks including: DHCP, DNS and RRAS. Prerequisite: Server Operating Systems

Network Management II 120 hours
This course prepares students for the Windows Server 2008 Administration certification exam. Students learn to configure and troubleshoot Windows Server 2008 Network Infrastructures. It covers planning, securing and managing Windows 2008 Servers, including deployments, services, network security and infrastructures. The course covers the most common network technologies including DNS, DHCP, IPv6 network addressing, fault tolerance, RDC, RAID, SAN and VPNs.

Network Security Awareness 120 hours
Students demonstrate knowledge and competency in PC, Server, and Internet Security. Students utilize these skills in preparation for positions related to the maintenance of computer and computer-related equipment through hands-on and project-based learning, textbook assignments, and Internet research. The focus of this course is in the hardware area. Prerequisite: Network Management
Information Technology (continued)

Network Systems Capstone 150 hours
Work-based learning experience, project-based instruction and teamwork are utilized to reinforce network administration skills. Students make final preparations for industry certifications as they master competencies. Students select from various project options to finalize portfolios that highlight skills and certifications. Students may also undertake special projects, cross-train or participate in workplace learning opportunities to enhance skills in accordance with industry demands. Prerequisite: All other required courses in career major

Server Operating Systems 120 hours
Students perform server installation, active directory configuration, and administration duties to provide support for network users in various work environments. Prerequisite: Client Operating Systems

Law, Public Safety, Corrections & Security

Courtroom Evidence & Testimony 48 Hours
This course covers the study of law, rules and types of evidence as they pertain to admissibility in the court system of the United States of America. Students learn appropriate ways to present testimony in court.

Courtroom Procedures 30 Hours
In this course students learn appropriate courtroom etiquette and testimony procedures along with prisoner care and responsibilities in the courtroom.

Defensive Tactics for Law Enforcement 75 Hours
In this course students study and practice methods of defense employed by law enforcement officers.

Detention Officer Capstone 30 Hours
In this course students make final preparation for industry certifications and finalize portfolios that highlight skills and certifications. Students may also undertake special projects, cross-train or participate in workplace learning opportunities to enhance skills in accordance with industry demands.

Emergency Procedures 60 Hours
In this course students learn to identify emergency situations typical of a corrections facility and to respond appropriately.

Emergency Telecommunications 75 Hours
In this course students learn the duties and responsibilities of a public safety telecommunications operator.

Ethics & Professional Behavior in Law Enforcement 48 Hours
In this course students explore their professional duties and the rational for them when facing ethical dilemmas in the criminal justice career field.

Grievance & Disciplinary Procedures 30 Hours
In this course students learn the disciplinary process for handling rules violations by inmates as well as the procedures inmates may use to resolve issues or disputes with prison staff.

Healthcare Provider CPR & First Aid 15 Hours
This course provides the most current guidelines for CPR developed by the American Heart Association. Students receive training in Cardiopulmonary Resuscitation (CPR)/Automated External Defibrillator (AED)/Foreign Body Airway Obstruction (FBAO). Students have an opportunity to become certified in Healthcare Provider CPR. This course provides the knowledge for students to perform basic first aid. Students are provided an opportunity to gain skills toward first aid competency such as victim assessment, splinting, controlling bleeding, poisoning and burns.

Introduction to Detention Services 30 Hours
This course covers the history, trends and developments in all elements of a modern correctional system for the treatment of juvenile and adult offenders.

Introduction to Law Enforcement 48 Hours
This course provides an introduction to the historical background, professional direction, agencies and processes, purposes, functions, ethics, administration, and technical problems of the criminal justice system. Areas examined are municipal, state, and federal systems. The powers and limitations of the law enforcement officer will be discussed.

Law Enforcement Equipment and Weapons 60 Hours
This course is a study of various types of equipment and weapons currently used by law enforcement. Students study safety policies, procedures, care and maintenance of weapons.

Law Enforcement Officer Prep Capstone 30 Hours
In this course students make final preparation for industry certifications and finalize portfolios that highlight skills and certifications. Students may also undertake special projects, cross-train or participate in workplace learning opportunities to enhance skills in accordance with industry demands.

Oklahoma Jail Standards 45 Hours
This course is an overview of the Oklahoma Jail Standards: Chapter 670 and covers the material required to take the Oklahoma Department of Health jail certification examination for corrections officers.

Penal Code and Criminal Law 48 Hours
In this course students study the legal basis of law enforcement including categories, features of crimes and elements of crimes, effects of legal decisions on criminal law, local ordinances and regulatory functions.

Police Function & Fundamentals 48 Hours
In this course students gain the theory and basic knowledge required to perform as an entry-level peace officer. Areas of study include authority, ethics, arrest powers, collection of evidence, U.S. Constitutional law, public relations, patrolling, and criminal procedure.

Prison Gangs 30 Hours
This course is designed to instruct corrections and detention officers in issues and procedures involved in gang supervision in a corrections setting.

Prisoner Rules & Regulations 30 Hours
In this course students study inmate rules and regulations generally found in correctional facilities. Students concentrate on the specific rules and regulations outlined in Title 310 of the Oklahoma Jail Standards.

Prisoner Transport 30 Hours
In this course students learn the variety of methods used to safely transport prisoners.

Rank & Structure 15 Hours
In this course students learn to identify the typical organizational structure in a law enforcement setting.

Rights & Responsibilities of Prisoners 30 Hours
Even the most chronic or hardened inmates have basic rights protected by the U.S. Constitution. In this course students learn about prisoners’ rights and responsibilities in the penal system.

Security Procedures 45 Hours
This course covers basic and advanced security procedures in a corrections setting. Topics include goals of security, contraband, counts, key and tool control, patrolling, informants, daily inspections and transporting inmates.

Supervision of Prisoners 30 Hours
In this course students learn key aspects of general inmate supervision as well as the detailed supervision techniques included in the Oklahoma Jail Standards.

Tactical & Interpersonal Communications 30 Hours
This course is an introduction to negotiations, communications, critical thinking, prioritization, telephone etiquette and stress management.
Technical Investigations 96 Hours
In this course students study the legal and technical procedures required to gain the
knowledge necessary to prove the elements of crimes as defined by Title 21 Oklahoma State
Statutes. The course includes the search, collection and preservation of evidence,
witness and victim interviewing, preparation of reports, crime scene records, standard
crime scene photography, and virtual crime scene photography.

Traffic Management & Accident Investigation 48 Hours
In this course students learn the principles of traffic control, traffic safety, traffic law
enforcement (Title 47, Oklahoma State Statutes), selective enforcement, traffic accident
investigation and industry-accepted techniques for standard and high-risk traffic stops.

Unarmed Security – Phase 1 30 Hours
In this course students learn the basic tasks in private security training required by the
Oklahoma Security Guard and Private Investigator’s Act of 1987. Areas of study include
interpreting the O.S.G.P.I. Act, responding to accidents and emergencies, writing field notes, writing reports, interpreting legal powers and limitations. Upon
completion of Unarmed Security Phases 1 and 2, students qualify to sit for the State
Unarmed Security exam for Oklahoma State Unarmed Security Guard License.

Unarmed Security – Phase 2 30 Hours
In this course students study the private security training required by the Oklahoma
Security Guard and Private Investigator’s Act of 1987. Areas of study include practicing
public relations, performing fixed post duties, patrolling and investigating security incidents. Upon
completion of Unarmed Security Phases 1 and 2, students qualify to sit for the State
Unarmed Security exam for Oklahoma State Unarmed Security Guard License.

Workforce Staging 30 Hours
Content of this course is integrated within the other courses of this career major and is
aimed at developing students’ leadership and employability skills.

Manufacturing
Air Carbon Arc Cutting and Gouging 15 hours
This course is an introduction to air carbon arc cutting equipment and procedures. The
course covers how to identify electrodes and safe operations of equipment. Instructions in
performing air carbon arc welding and gouging work assignments are also given in
this course. Prerequisite: Completion of SMAW Structural Welder course sequence

Beads & Fillet Welds SMAW 180 hours
This course is an introduction to the preparation and setup of arc welding equipment and the processes of striking an arc. It also covers how to make stringers, weave overlapping beads and fillet welds.

CAD Mechanical Level 1 60 hours
This course is project based utilizing knowledge and skills learned early in the
drafting coursework and at the fundamental level. This course is for the Mechanical area
with some information related to Pipe & Electronics drafting. This course requires lab
work. Prerequisite: Manufacturing Computer-Aided Drafting & Design

CAD Mechanical Level 2 60 hours
This course is project based utilizing knowledge and skills learned in the drafting at
the fundamental second level building on the projects in level 1. This is for the
Mechanical drafting majors and it may include related areas. This course requires lab work.
Prerequisite: CAD Mechanical Level 1

CAD Mechanical Level 3 60 hours
This course is project based utilizing knowledge and skills learned in the drafting at
the intermediate third level building on the projects in level 2. This is for the area of
Mechanical Drafting; other related areas may be included. This course requires lab work.
Prerequisite: CAD Mechanical Level 2

Drawing and Document Management 45 hours
This course is for the development of skills for file management and use of technology to
support effective organizational skills within occupational workflow and processes.

Engineering Computer-Aided Drafting & Design 120 hours
This course is an engineering focused drafting course utilizing Computer-Aided
Drafting and Design (CADD) software that develops computer skills and electronic
skills and applications within engineering applications of drafting within manufacturing.
Topics covered include advanced computer operations, CAD application software, and
principles of structural drafting, process pipe drawings, electrical/electrical drafting, and
civil drafting

Fundamentals of Welding 30 hours
This course is an introduction to basic welding safety, math, hand tools, power tools, blueprints, rigging, communication skills and employability skills.

Fundamentals of Computer-Aided Drafting and Design 120 hours
This course is the basic CAD software course. Topics covered are safety, tools, equipment, media and reproduction, sketching, scale usage, drawing formats, alphabet of lines, lettering and geometric construction, computer literacy through CAD, operating systems and file utilities, software functions, office functions, hardware applications, coordinates, drawing environment, plotting, printing, multi-view drawing environment, geometry modifications and dimensioning, symbol library development, introduction to parametric and software, introduction to multiple CAD software used to manipulate text and graphics, and basic CAD applications.

Fundamentals of Cutting Processes 30 hours
This course is an introduction to uses of safety equipment, protecting clothing, and
procedures for cutting metals.

GMAW Pipe Welding 80 hours
This course is an introduction to open root V-grove welding of pipe in the 2G, 5G and
6G positions. Prerequisite: Completion of SMAW Structural Welder course sequence

GMAW Structural Plate 95 hours
This course covers how to build a pad of stringer and weave beads using filler metals and
shielding gas. Students will learn how to perform GMAW multi-pass fillet welds
on plate in multiple positions. Prerequisite: Completion of SMAW Structural Welder course sequence

GMAW/FCAW Equipment and Setup 15 hours
This course is an introduction to safety procedures for GMAW and FCAW equipment and
explains the filler metals and shielding gases used to perform GMAW and FCAW. It
also covers equipment setup and operations. Prerequisite: Completion of SMAW Structural Welder course sequence

GTAW Aluminum Plate 45 hours
This course is an introduction to open root V-grove welding of aluminum plate in the
2G, 5G and 6G positions. Prerequisite: Completion of SMAW Structural Welder course sequence

GTAW Carbon Steel Pipe 90 hours
This course is an introduction to how to set up GTAW equipment, procedures and
techniques used to make V-groove pipe welds with GTAW in the 1G-ROTATED, 2G, 5G and 6G positions. Prerequisite: Completion of Structural Welder course sequence
Manufacturing (continued)

GTAW Equipment and Filler Materials 15 hours
This course is an introduction to GTAW safety, identification of uses of GTAW equipment, filler metals and shielding gases and setup of equipment. Prerequisite: Completion of SMAW Structural Welder course sequence

GTAW Structural Plate 80 hours
This course is an introduction in how to pad in all positions using GTAW and carbon steel filler metal. Students will learn how to make multi-pass V-butt open-groove weld with carbon steel filler metal in the 1G, 2G, 3G, and 4G positions. Prerequisite: Completion of SMAW Structural Welder course sequence

Manufacturing Computer-Aided Drafting & Design 120 hours
This course is a manufacturing focused drafting course utilizing Computer-Aided Drafting and Design (CADD) software that develops computer skills and electronic skills and applications within the field of drafting within manufacturing. Topics covered are advanced computer operations, introduction to manufacturing drafting, CAD application software, bill of materials for drawings, manufacturing treatments of materials in drawings, shop processes, precision measuring equipment, revision drawings and notes, fasteners, tolerances and fits, geometric dimensioning and tolerancing, working, assembly, and development drawings, spur, bevel, and worm gear drawings, cam drawings, weldment drawings, casting drawings, forging drawings, spring drawings, jig and fixture drawings, tool and die drawings, assembly drawings of bearings and seals, mechanical power transmission drawings, application software for mechanical drafting, intersections, revolution drawings, sheet metal assembly drawings, bend allowances, and preparation of geometry for exporting/translation for manufacturing processes.

Metal Characteristics and Properties 30 hours
This course is an introduction to physical characteristics, mechanical properties, composition and classification of common ferrous and nonferrous metals. The course covers visual inspection and x-ray fluorescent spectrometry methods used to identify metals.

Metal Preparation and Heat Treatments 30 hours
This course provides information on how to clean and prepare all types of base metals for cutting and welding. The course explains preheating, inter-pass temperature control, and post-heating procedures that sometimes need to be done to preserve weldment ductility and weld quality. It introduces students to the equipment used for heat treatment of metals.

Open-Root Pipe Welds-SMAW 120 hours
This course is an introduction to open-root welds and how to set up welding equipment for making open-root welds. It provides the procedures for making 1G, 2G, 5G, and 6G open-root pipe welds. Prerequisite: Completion of SMAW Structural Welder course sequence

Oxyfuel Cutting 30 hours
This course is an introduction to safety requirements for oxyfuel cutting. It identifies oxyfuel cutting equipment and setup procedures, and how to light, adjust and turn off equipment. Instruction on cutting techniques, straight line piercing, bevels, washing and gouging is also given.

Plasma Arc Cutting 15 hours
This course is an introduction to plasma arc cutting equipment and procedures. This course covers safe amperage, gas pressure, and flow rate, plasma arc cutting methods for piercing, slotting, squaring, and beveling metals. Prerequisite: Completion of SMAW Structural Welder course sequence

Presentation Graphics Animation 195 hours
In this course, students will utilize drawings as presentation graphics and interface with software and hardware to present and use outcomes of drawings and models in a presentation format electronically and/or media based. Topics covered in this course are Wire Frame/Mesh, Extrusion, Intro to Solid Models, Animation, Software Interface, and 3-D Printing.

Principles of CAD Design 165 hours
This course is the basic CAD software course. Topics covered are safety, tools, equipment, media CAD reproduction, sketching, scale usage, drawing formats, alphabet of lines, lettering and geometric construction, computer literacy through CAD, operating systems and file utilities, software functions, office functions, hardware applications, coordinates, drawing environment, plotting, printing, multi-view drawing environment, geometry modifications and dimensioning, symbol library development, introduction to parametric and software, introduction to multiple CAD software used to manipulate text and graphics, and basic CAD applications.

SMAW Electrodes 15 hours
This course is an introduction to electrode characteristics and different types of filler metals. It describes the role of the American Welding Society (AWS) and the American Society of Mechanical Engineers (ASME). The course covers safety storage and control of filler metals and identifies the use of codes.

SMAW Equipment and Setup 15 hours
This course is an introduction to SMAW welding and safety and how to connect welding current and set up arc welding equipment. The course covers the importance of tools used to clean welds.

Groove Welds with Backing-SMAW 70 hours
This course is an introduction to groove welds and how to start up welding equipment for making groove welds, how to make groove welds with backing, performing flat, horizontal, vertical and overhead groove welds.

SMAW Open V-Groove Welds 120 hours
This course is an introduction to open V-groove welds and how to set up welding equipment for making an open V-groove weld. Procedures for making flat, vertical, horizontal, and overhead open V-groove welds are covered.

Weld Quality 15 hours
This course is an introduction to codes that govern welding. The course identifies and explains weld imperfections and causes, examination practices, qualification tests and the importance of quality welds.

Welding Blueprints 15 hours
This course is an introduction to basic blueprint terms, components and symbols, types of blueprint drawings (civil, architectural, structural, mechanical, plumbing/piping and electrical), and interpretation of drawing dimensions and specifications.

Welding Detail Drawings 30 hours
This course is an introduction to identifying and understanding welding detail drawings. It includes fills, object views, dimensioning on drawings, use of notes and the bill of materials. Also given is an introduction to the different welding symbols, different types of fillet welds, groove welds, non-destructive examination symbols, how to read welding symbols on drawings and specifications and welding procedures.

Welding Joint Fit-up and Adjustment 15 hours
This course is an introduction to identifying and explaining job code specifications, use of fit-up gauges and measuring devices to check fit-up and alignment, the use of plate and pipe fit-up and alignment tools to properly prepare joints. The course introduces steps to check for joint misalignment of poor fit.

Workforce Staging 30 hours
This course is designed to be delivered as an integrated component within the courses taken by the individual student. Course is designed for the development of leadership, personal development and employability skills attainment.
Manufacturing (continued)

Marketing Sales and Service

Accounting I 120 hours
This course will provide students with a strong foundation in generally accepted accounting principles and techniques needed for success in careers in business related fields.

Advanced Entrepreneurship 120 hours
This course is designed to provide a detailed study of all aspects related to starting a business. The course includes the basic fundamentals of marketing and business operations and advanced topics to consider when preparing for business ownership. Through self-assessment activities, students will identify their potential for creating a business or a marketable product/idea. Students will apply what they learn by developing their own detailed business plan. Self-employment is presented as a viable career option.

Advertising Strategies 120 hours
This is a course of study in the basic functions of advertising; its role in marketing communications mix; economics, consumer behavior, and social influence. Students will explore advertising techniques and the technology used in advertising institutions and media; campaigns and appropriations; retail and business-to-business aspects to develop and implement a promotional plan.

Business and Marketing Communications 60 hours
This is a course of study in the application of marketing skills developed through a variety of informal and formal experiences. The performance-based course will emphasize effective interpersonal and team building skills along with written and oral communication techniques. Technology will be used to create and deliver presentations, enhance problem-solving situations, and practice critical thinking and decision-making. Job interview, research paper, and/or projects will culminate this course.

Buying and Merchandising 60 hours
This is an introductory course designed to explore the role and responsibility of a buyer and merchandiser. This course will cover job skills for the buyer or merchandiser including the ability to use mathematical formulas, budgeting, research, making purchases, and additional responsibilities of the buyer.

E-Commerce Marketing 120 hours
This is a course of study in the development of communication and marketing strategies for effective electronic commerce to take place. The primary focus is how to: market products/services, use the Internet, identify markets, and communicate with them. This course provides an overview of the marketing activities businesses need to perform in order to maximize return and meet customer expectations with electronic purchases.

Entrepreneurship 120 hours
This course is designed for the study of all aspects of starting a business. The course includes the basic fundamentals of marketing and business operations. Through self-assessment activities, students will identify their potential for creating a business or a marketable product/idea. Students will apply what they learn by developing their own business plan. Self-employment is presented as a viable career option.

Entrepreneurship Awareness 120 hours
This course allows students to discover and determine their entrepreneurial aptitude. Students will explore the relationship between entrepreneurship, business and marketing skills, creative instincts, self-esteem/discipline, and independence. Career opportunities and pre-employment skills required for success in the areas of business, marketing, and management will also be introduced during this course. Students will develop leadership traits and identify their leadership potential through participation in the DECA (an association of marketing students) student organization.

Fundamentals of Technology 120 hours
This course provides students with the fundamental concepts, principles, and ideas needed to understand how business is operated and managed in a rapidly changing global environment, which is needed for success in careers in business related fields. This course also provides job readiness skills and soft skills that are critical for success in any workplace setting.

Intro to Entrepreneurship Career Major Capstone 120 hours
Internships, project-based instruction and additional industry certifications will be utilized in this course to reinforce skills obtained within the Intro to Entrepreneurship Career Major. Students will make final preparations for industry certifications as they master outlined competencies. Students will select from various project options to finalize portfolios that highlight skills and certifications. Students may also undertake special projects, cross-train, or participate in workplace learning opportunities to enhance skills in accordance with industry demands.

Small Business Entrepreneur Career Major Capstone 120 hours
Internships, project-based instruction and additional industry certifications will be utilized in this course to reinforce skills obtained within the Small Business Entrepreneur Career Major. Students will make final preparations for industry certifications as they master outlined competencies. Students will select from various project options to finalize portfolios that highlight skills and certifications. Students may also undertake special projects, cross-train, or participate in workplace learning opportunities to enhance skills in accordance with industry demands.

Science, Technology, Engineering & Mathematics

AC Circuits for Electronics Technicians 180 hours
This course covers alternating current in detail, including the concepts of frequency, amplitude and phase, and the effect alternating current has on passive devices such as resistors, capacitors, inductors and conductors. Calculations will include capacitive and inductive reactance and resonance. Special emphasis will be placed on multi-element filters and troubleshooting AC circuits. Prerequisite: DC Circuits for Electronics Technicians

AP Biology 120 hours
AP Biology is designed to be the equivalent of a first year Biology post-secondary course. The range and depth of knowledge of the content area, type of labs, and time expenditure is elevated and extensive. Students will develop a conceptual framework for biology and an appreciation of science as a process. The course follows Collegeboard’s outline and covers eight major themes. They are: Science as a Process, Evolution, Energy Transfer, Continuity and Change, Relationship of Structure to Function, Regulation, Interdependence in Nature, Science, Technology, and Society. Labs play an integral part of this course and there are twelve lab topics that will be covered. They will provide the student with an opportunity to learn a variety of skills and facts, principles, and concepts of biology. Lab investigations will encourage higher-order thinking, generating ideas, and formulating hypotheses. All students are expected to take the AP Exam upon completion of this course. Prerequisite: Biology I and Geometry

AP Calculus 120 hours
This course is primarily concerned with developing the students understanding of the concepts of calculus and providing experience with its methods and applications. Prerequisite: Pre-AP Trigonometry/Pre-Calculus
AP Chemistry  120 hours
Chemistry is the study of the properties of materials and the changes that materials undergo. A student will see how chemical principles operate in all aspects of our lives, from everyday activities to far-reaching chemical matters like the development of drugs to cure cancer. Students will learn through laboratory and lecture methods using group and individual activities, cooperative learning, presentations, and technology to enhance the learning environment. Students will learn how to design and conduct experiments using a variety of laboratory techniques and technology to investigate a chemical concept. They will apply stoichiometric concepts to chemical reactions and analyze how atomic structure relates to periodicity. The student will analyze how atomic structures relate to chemical bonding and apply chemical concepts to reactions in aqueous solutions. They will learn about gas laws as well as study electrochemistry. Prerequisite: Chemistry I or Pre-AP Chemistry and Algebra I

AP Environmental Science  120 hours
AP Environmental Science is a course that will provide students with the scientific principles, concepts, and methodologies required to understand the interrelationships of the natural world, to identify and analyze environmental problems both natural and human-made, to evaluate the relative risks associated with these problems, and to examine alternative solutions for resolving or preventing them. Environmental science is interdisciplinary; it embraces a wide variety of topics from different areas of study. Yet there are several major unifying constructs, or themes, that cut across the many topics included in the study of environmental science. Prerequisite: Biology I and Geometry

AP Physics  120 hours
AP Physics B has a trigonometry emphasis. Five major content areas of physics will be taught. They are: mechanics, thermodynamics, waves and optics, electricity & magnetism, and modern physics. AP Physics C expects the student to have knowledge of trigonometry and calculus. It is an analytical course that focuses on mechanics and electricity & magnetism. AP Physics C-Mechanics should provide instruction in each of the following content areas: kinematics, Newton’s Laws of Motion, work, energy and power, systems of particles and linear momentum, circular motion and rotation, and oscillations and gravitation. AP Physics C-Electricity and Magnetism should provide instruction in each of the five content areas: electrostatics; conductors, capacitors, and dielectrics; electric circuits; magnetic fields; and electromagnetism. These subjects will be covered in depth with laboratory activities and lab reports an essential part of the coursework. Students will be expected to sit for the AP exam at the completion of the course.

AP Statistics  120 hours
AP Statistics is a course that introduces students to the main concepts in statistics and enables them to collect, analyze, and draw a conclusion from data. The four main concepts are: Exploring Data, Sampling and Experimentation, Anticipating Patterns, and Statistical Inference. Students are expected to take the AP Statistics Exam upon completion of the course and could receive college credit with an acceptable score. AP Statistics follows AP Central’s recommended course content. Prerequisite: Pre-AP Trigonometry/Pre-Calculus

Data Communications for Electronics Technicians  120 hours
This course teaches principles and protocols of data communications techniques, including wired and wireless, cabling installation and troubleshooting, traditional AM and FM analog broadcasting, digital data communication techniques and microwave circuits. Emphasis will be placed on troubleshooting and repair techniques, safety and reliability. Prerequisite: Instruments and Measurements for Electronics Technicians

DC Circuits for Electronics Technicians  120 hours
This course teaches students the theory and practical principles of electronic devices and circuits. Emphasis will be placed on troubleshooting and repair techniques, safety and reliability. Prerequisite: Instruments and Measurements for Electronics Technicians

Digital Electronics  120 hours
This course teaches students about the electronic circuits used to process and control digital signals. Students are exposed to the design process of combinational and sequential logic design, teamwork, communication methods, engineering standards, and technical documentation. Students will continually hone their interpersonal skills, creative abilities and understanding of the design process.

Digital Systems for Electronics Technicians  90 hours
This course teaches students the theory and practical principles of digital electronic devices and circuits. Emphasis will be placed on troubleshooting and repair techniques, safety and reliability. Prerequisite: Semiconductor Circuits for Electronics Technicians

Electrical Safety for Electronics Technicians  15 hours
This course provides instruction in safety rules and regulations for electricians, precautions for electrical and mechanical hazards on the job, tool and equipment safety, first aid, CPR, blood borne pathogens, OSHA and NFPA mandated lockout/tagout, personal protective equipment, right to know and confined space entry procedures.

Electromechanical Devices for

Electronics Technicians  45 hours
This course covers the many devices that convert electricity or electronic signals into other forms of power and those which convert other forms of power into electricity or electronic signals. Emphasis will be placed on troubleshooting, repair, safety and reliability. Prerequisite: Instruments and Measurements for Electronics Technicians

Electronic Hand and Power Tool for Electronics Technicians  15 hours
This course covers the proper use and maintenance of power and hand tools. Prerequisite: Electrical Safety for Electronics Technicians

Engineering Design and Development  120 hours
This course is an engineering research course in which students work in teams to research, design and construct a solution to an open-ended engineering problem. Students identify a problem, complete extensive research, apply principles developed in the preceding courses and are guided by a community mentor. Prerequisite: Principles of Engineering

Instruments and Measurements for Electronics Technicians  15 hours
This course covers the theory and practical considerations of electronic measurements, including concepts of accuracy and precision. The construction, calibration and maintenance of test equipment and special circuits to facilitate measurement will be covered in detail. The concepts of measurement error, parallax error and circuit loading will be covered. Prerequisite: Electrical Safety for Electronics Technicians

Introduction to Engineering Design  120 hours
This course teaches students problem-solving skills using a design development process. Models of product solutions are created, analyzed and communicated using solid modeling computer design software.

Linear Circuits for Electronics Technicians  90 hours
This course teaches students the theory and practical principles of analog electronic devices and circuits including passive and active linear electronic devices. Emphasis will be placed on troubleshooting and repair techniques, safety and reliability. Prerequisite: Semiconductor Circuits for Electronics Technicians
Science, Technology, Engineering & Mathematics (continued)

Mechanical Fasteners and Terminals for Electronics Technicians 15 hours
This course covers in depth the many standards and uses of mechanical fasteners and electrical/electronic terminals used in constructing electronic circuits and devices. Special emphasis will be placed on nomenclature and specifications, print and schematic reading and mechanical construction techniques. Prerequisite: Soldering for Electronics Technicians Using 3-D imaging software and current scientific research students will design and build a model of a therapeutic protein. Prerequisite: Human Body Systems

Microprocessor Systems for Electronics Technicians 60 hours
This course builds on the digital systems course, introducing microprocessors, memory systems, assembly language programming, and interfacing microprocessors with external circuits to control signal and power flow and sense input conditions. Digital to analog and analog to digital concepts will be taught and special emphasis will be placed on troubleshooting and repair techniques, safety and reliability. Prerequisite: Digital Systems for Electronics Technicians

Pre-AP Algebra II 120 hours
This course will enhance and expand the mathematical foundations of Algebra I and Geometry. The course will stress the fundamental extension of previous mathematics and the preparation for future higher-level mathematics courses. It will involve operations with real and complex numbers as well as matrices. The problem solving processes will use functions and relations. Within the course applications of math, and while satisfying predictions based on a set of data, the use of data analysis, and statistics will be justified. Students who master Pre-AP Algebra II will gain experience with quadratic functions, conic sections, logarithmic and exponential functions, linear functions, solution methods for systems of linear functions, and matrix operations. Prerequisite: Algebra I

Principles of Engineering 120 hours
This course helps students understand the field of engineering /engineering technology. Students explore various technology systems and manufacturing processes helping them learn how engineers and technicians use math, science and technology in an engineering problem solving process to benefit people. This course also includes concerns about social and political consequences of technological change. Prerequisite: Introduction to Engineering Design

Pre-AP Chemistry 120 hours
Pre-AP Chemistry is designed to prepare students for the complex thinking that will be expected in future science courses. This course will focus on the development of the student as a scientist through the study of chemistry. Being a scientist requires a broad set of tools, including theory, problem solving, written and oral communication, interpreting data and laboratory skills. Areas covered are: Matter, atoms & periodic table, molecules & compounds, chemical reactions & stoichiometry, Aqueous solutions & reactions, Gases, Energy & Chemical Reactions, Atomic & Molecular Structure. Prerequisite: Algebra I and Biology I

Pre-AP Geometry 120 hours
This course will allow students the chance to relate mathematics to real-life situations and careers. It will build logical reasoning capabilities as well as give students an opportunity to justify conclusions in a structured manner. Students will analyze characteristics and properties of two- and three-dimensional geometric shapes. They will use visualization, spatial reasoning, and geometric modeling to solve problems. Throughout the course students connect the algebra skills previously developed to the geometric concepts. Pre-AP Geometry is a rigorous course that prepares students for higher-level mathematics. Prerequisite: Algebra I

Pre-AP Physics 120 hours
In this laboratory-based course, students learn the basic motions of the universe and the equations that describe them. Topics include Newtonian physics, thermal physics and the fluid dynamics, waves and optics, electricity and magnetism, and atomic and nuclear physics. Students will perform experiments and interpret the results of observations, activities which involve the assessment of experimental errors and uncertainties.

Pre-AP Trigonometry/Pre-Calculus 120 hours
This course is designed to be in preparation for Calculus or AP Calculus. A graphing calculator is recommended. The first part of the course includes a study of six basic functions of trigonometry, solutions of right and oblique triangles, identities, and complex numbers. The calculator is used as an aide to computations. The second half of the course gives a review study of straight lines, conic sections, simplification of equations, algebraic curves, transcendental curves, a completed study of straight lines, simplification of equations, polar coordinates, and an introduction to limits and derivatives. Prerequisite: Algebra II or Pre-AP Algebra II

Semiconductor Circuits for Electronics Technicians 150 hours
This course covers the many active circuits that use semiconductors to measure, amplify, control, receive and transmit electronic signals. Specialized circuits such as bridges, classes of amplifiers, oscillators, active filters and power control circuitry will be covered. Much of the course will focus on hands-on construction, testing and troubleshooting circuits. Prerequisite: Semiconductor Devices for Electronics Technicians

Semiconductor Devices for Electronics Technicians 90 hours
This course covers two-, three- and four-layer semiconductor devices commonly used in electronic circuits, including diodes, transistors, bi-polar as well as FET technologies, and specialized devices used in measurement and power control circuits. Much of the course will focus on hands-on construction, testing and troubleshooting circuits for the purpose of examining the operation of semiconductor devices. Prerequisite: AC Circuits for Electronics Technicians

Soldering for Electronics Technicians 15 hours
This course covers the theory and essentials of preparing surfaces and leads for soldering, preparation and adjustment of soldering equipment, and procedures for through-hole, surface mount, and lead free soldering for reliability. Mil-Spec procedures will be covered briefly. Prerequisite: Electrical Safety for Electronics Technicians

Workforce Staging 30 hours
This course is designed to be delivered as an integrated component within the courses taken by the individual student. The course is designed for the development of leadership, personal development and employability skills attainment.
Science, Technology, Engineering & Mathematics (continued)

Transportation

AC Circuits for Electronics Technicians 180 hours
This course covers alternating current in detail, including the concepts of frequency, amplitude and phase, and the effect alternating current has on passive devices such as resistors, capacitors, inductors and conductors. Calculations will include capacitive and inductive reactance and resonance. Special emphasis will be placed on multi-element filters and troubleshooting AC circuits. Prerequisite: DC Circuits for Electronics Technicians

Aircraft Cleaning and Corrosion Control 30 hours
This course provides instruction in the different types of corrosion and the causes of each. Students will identify and use the proper materials and processes to remove corrosion by products, treat corroded areas and apply the proper type of protection.

Aircraft Drawings 30 hours
This course provides training in the information presented on typical aircraft blueprints, graphs and charts. The purpose, function and types of aircraft drawings will be covered. Students will extract information from blueprints, schematics and graphs, and make aircraft sketches suitable for use on an FAA Form 337.

Aircraft Electrical Systems 52.5 hours
This course provides instruction in troubleshooting complex aircraft electrical systems. The student will install electrical system components and check these systems for proper operation. The student will be introduced to modern electronic control devices such as logic circuit components and digital electronics. Prerequisite: Students must have completed the General Program or have been authorized to attend this course by the Director/Assistant Director.

Aircraft Structural Materials 22.5 hours
This course provides instruction in the relative strengths and advantages of common aircraft materials and the identification systems used for aluminum and steel. Heat-treating processes and their effects will also be covered. Students will identify and select common nonmetallic materials, use proper handling procedures and determine where the materials will be used.

Aircraft Structures, Aerodynamics, Assembly and Rigging 67.5 hours
This course provides instruction in the different types of aircraft structure and their functions. Students will cover high-speed aerodynamics as related to aircraft structural design for transonic and supersonic speeds. Students will rig and check the alignment of fixed-wing aircraft. In addition, hands-on training will be provided in assembling aircraft components, including flight control surfaces and balancing, rigging and inspecting movable primary and secondary flight control systems. Students will cover rotary-wing aerodynamics and will be introduced to the process of rigging rotary-wing aircraft. At the end of the session, comprehensive training will be provided on the proper procedures for rigging an aircraft. Prerequisite: Students must have completed the General Program or have been authorized to attend this course by the Director/Assistant Director.

Aircraft Welding 30 hours
This course provides instruction on the different welding methods used in aircraft repair. Students will be introduced to the procedures for welding magnesium, titanium, aluminum and stainless steel, and the procedures for soldering stainless steel and fabricating tubular structures. In addition, hands-on training will be provided in soldering, brazing, gas-welding and arc-welding steel. Prerequisite: Students must have completed the General Program or have been authorized to attend this course by the Director/Assistant Director.

Aircraft Wiring Practices 45 hours
This course provides instruction in aircraft electrical wiring installations. Students will route and secure wires in bundles or conduit and install the proper termination for given situations. Students will also service and repair wiring installations. Prerequisite: Students must have completed the General Program or have been authorized to attend this course by the Director/Assistant Director.

Auto Collision Damage Analysis 75 hours
Within this course the students will learn to inspect a damaged vehicle and correctly identify damage. This damage analysis will cover the entire vehicle from minor to major damage with structural misalignment. This course will cover the different types of vehicle construction found on the road today, such as uni-body, full body-over-frame and the hybrid frame/semi-unibody. Students will learn to look for indicators of damage and how collision energy is managed and travels through a vehicle during a collision. Some of the measuring equipment that will be covered is the centerline gauge, tram bar, universal measuring system and computer measuring systems. Measuring of the vehicle structure will be covered with the students learning to set-up and analyze the measurements to determine damage. The students will learn to look at damage in 3-dimension, which are length, width and height.

Auto Collision MIG (GMAW) Welding 105 hours
In this course the student will learn about the specific personal safety equipment used when MIG welding, and how to protect the vehicle when welding. The student will cover the MIG welding equipment and how to tune and trouble shoot the welder. Students will learn to join two pieces of metal using the appropriate process and joint selection. The welding joints covered will be: lap/fillet, butt, butt w/backing and plug. Students will learn techniques for welding in the vertical and overhead position using I-Car specific specifications.

Auto Collision Non-Structural Metal Straightening/Repair 90 hours
In this course the student will learn the basics of using metal straightening tools, such as dollies and hammers to repair minor dents and dings in sheet metal. Students will cover techniques to repair contours and body-lines in sheet metal. Metal shrinking and stretching will be taught to help students bring the metal back to original contour. Students will learn about the different body fillers. Students will learn techniques to mix and apply body filler. Students will learn to select the proper sandpaper and sanding equipment and learn techniques to sand the cured body filler to original contour then prepare the repair for primer.

Auto Collision Plastic Component Repair & Replacement 60 hours
In this course the student will learn to identify different types of plastic used in the construction of vehicles. Students will learn to make repair/replace decisions on plastic parts. Students will learn to prepare for both single and two-sided repairs on plastic parts. The course includes both adhesive type repairs and plastic welding. Sheet Molded Compound (SMC) identification along with one-sided and two-sided repairs will be covered.

Metro Technology Centers • Catalog 2014-2015 • 405-595-4678
Transportation (continued)

Auto Collision Trim & Hardware 30 hours
Within this course the student will learn about the different fasteners used in vehicle construction. Students will cover removing and installing trim, locks and trim panels while experiencing different types of hardware or attachment methods.

Auto Collision Written Estimating 30 hours
This course will cover how an estimate becomes the communication tool between the repair facility and the insurance company or customer. In this course the student will learn to write an accurate damage report by collecting the pertinent information from the customer and the vehicle while using procedure pages in manual estimating guides. Students will learn to look up parts prices and labor hours as well as how to make repair judgment calls when straightening panels. The student will assemble all of the information into a complete damage estimate.

Automotive Body Panel Adjustment and Alignment 45 hours
In this course the students will learn to remove, install and align bolted body parts. Some of the parts covered in this course will be fenders, hoods, doors, decklids, bumpers and bumper covers. This course will also cover wind noise and water leak detection related to panel alignment.

Automotive Detailing 60 hours
In the detailing course the student will learn to complete the refinishing repair. In doing this the student will learn to sand and polish the refinish material after curing, prepare for delivery by washing and cleaning interior and exterior of the vehicle.

Automotive Glass Replacement 60 hours
In this course the student will learn to identify types of automotive glass. Common and specialty tools used to remove and install glass will be covered. Students will learn techniques to remove and install stationary glass and be able to identify the properties and characteristics of primers, adhesives and sealants. Students will also cover movable glass and learn some techniques of trouble shooting the mechanisms and methods to remove and install movable glass components.

Basic Electricity AC 45 hours
This course provides instruction in the theory and principles of alternating current circuits. Students will compute and observe the effects of inductance, capacitance, and impedance in alternating current systems. Students will also construct basic AC electrical circuits, perform circuit analysis using electrical diagrams and measuring instruments, and conduct basic troubleshooting.

Basic Electricity DC and Batteries 60 hours
Students will receive instruction in the theory and principles of electricity, direct current circuits, and aircraft batteries. Students will use basic electricity laws and formulas in calculating and measuring voltage, current, power and resistance in electrical systems. Students will construct basic DC electrical circuits, perform circuit analysis using electrical diagrams and measuring instruments and conduct basic troubleshooting. Students will also inspect and service a lead-acid battery and a nickel cadmium battery.

Basic Physics and Aerodynamics 45 hours
This course provides instruction in the scientific principles that apply to the operation of aircraft, engines, and the equipment that the aviation maintenance technician will use on a daily basis. In addition, the makeup of the atmosphere, basic aerodynamics for fixed-wing aircraft, and stability and control will be covered.

Basic Propeller Systems 30 hours
This course provides instruction in the basic design and operating principle of propellers. Students will balance propellers and repair aluminum alloy propeller blades. In addition they will remove, install, track and perform routine maintenance on fixed-pitch propeller systems. Prerequisite: Student must have completed the general and airframe program or have been authorized to attend this course by the Director / Assistant Director.

Cabin Atmosphere Control Systems 30 hours
This course provides instruction on the components and operation of aircraft cabin atmospheric systems. Students will be introduced to inspecting, checking, troubleshooting, servicing and repairing heating, cooling, air conditioning, pressurization systems and air cycle machines. Hands-on training will be provided in inspecting, checking, troubleshooting, servicing and repairing oxygen systems. Prerequisite: Students must have completed the General Program or have been authorized to attend this course by the Director/Assistant Director.

Complex Propeller Systems 30 hours
This course provides instruction in the design and operating principles of constant speed and feathering propellers and their reciprocating and turbine engine applications. Students will install, track and perform routine maintenance on these complex propeller systems. Prerequisite: Student must have completed the general and airframe program or have been authorized to attend this course by the Director / Assistant Director.

Data Communications for Electronics Technicians 120 hours
This course teaches principles and protocols of data communications techniques, including wired and wireless, cabling installation and troubleshooting, traditional AM and FM analog broadcasting, digital data communication techniques and microwave circuits. Emphasis will be placed on troubleshooting and repair techniques, safety and reliability. Prerequisite: Microprocessor Systems for Electronics Technicians.

DC Circuits for Electronics Technicians 120 hours
This course teaches students the theory and practical principles of electronic devices and circuits. Emphasis will be placed on troubleshooting and repair techniques, safety and reliability. Prerequisite: Instruments and Measurements for Electronics Technicians.

Digital Systems for Electronics Technicians 90 hours
This course teaches students the theory and practical principles of digital electronic devices and circuits. Emphasis will be placed on troubleshooting and repair techniques, safety and reliability. Prerequisite: Semiconductor Circuits for Electronics Technicians.

Electrical Safety for Electronic Technicians 15 hours
This course provides instruction in safety rules and regulations for electricians, precautions for electrical and mechanical hazards on the job, tool and equipment safety, first aid, CPR, blood borne pathogens, OSHA and NFPA mandated lockout/tagout, personal protective equipment, right to know and confined space entry procedures.

Electromechanical Devices for Electronics Technicians 45 hours
This course covers the many devices that convert electricity or electronic signals into other forms of power and those which convert other forms of power into electricity or electronic signals. Emphasis will be placed on troubleshooting, repair, safety and reliability. Prerequisite: Instruments and Measurements for Electronics Technicians.

Electronic Hand and Power Tools for Electronics Technicians 15 hours
This course covers the proper use and maintenance of power and hand tools. Prerequisite: Electrical Safety for Electronics Technicians.
Transportation  (continued)

Federal Aviation Regulations
Publications and Records 45 hours
This course provides instruction in identifying the permanent records that must be maintained for an aircraft, the scope and details of the items to be inspected during a 100-hour inspection, logbook entry requirements for a 100-hour inspection and the proper record-keeping of aircraft maintenance in general. The Federal Aviation Regulations that govern the construction and maintenance practices of modern aircraft will also be covered as well as aircraft manufacturers’ maintenance publications. In addition, students will learn the privileges and limitations of the mechanic certificate and discuss Human Factors/ Maintenance Resource Management.

Fluid Lines and Fittings 30 hours
This course provides training in the identification and installation of fluid line components. Students will fabricate a rigid or flexible fluid line and install it on an aircraft system.

Fuel Systems 30 hours
This course provides instruction on the components and operation of the aircraft fuel system. Students will be introduced to checking and servicing fuel dump systems; performing fuel management transfer and defueling procedures; and inspecting, checking and repairing pressure refueling systems. Hands-on training will be provided in repairing fuel system components; inspecting and repairing quantity indicating systems; and inspecting, checking, servicing, troubleshooting and repairing the total fuel system. Prerequisite: Students must have completed the General Program or have been authorized to attend this course by the Director/Assistant Director.

Fundamentals of Automotive Service (NATEF aligned) 45 hours
This course covers occupational health and safety and tools and equipment identification, usage and operation. The student will learn about the history, current state and future of the automotive service industry. This course will cover dealership and independent operations. The student will learn vehicle identification and how to look up service information using several different sources. The student will learn vehicle maintenance, which will include fluid level checks and adjustments, peripheral electrical system checks and tire inspection and air pressure adjustment. In this course the student will learn basic measuring instruments used in vehicle service and diagnosis, as well as communication skills used throughout the automotive service industry.

Fundamentals of Reciprocating Engines 52.5 hours
This course provides instruction in the operating principles of aircraft reciprocating engines. Students will identify the basic components of a reciprocating engine and explain their function. They will be able to describe an engine from its identification number. Prerequisite: Student must have completed the general and airframe program or have been authorized to attend this course by the Director / Assistant Director.

Fundamentals of Turbine Engines 52.5 hours
This course provides instruction in the operating theory of aircraft gas turbine engines. Students will identify the basic components of a turbine engine, differentiate between turbine engine designs, describe the types of turbine engines, trace the airflow through a turbine engine and explain changes in the pressure, velocity and temperature of the air. Prerequisite: Student must have completed the general and airframe program or have been authorized to attend this course by the Director / Assistant Director.

Ground Handling and Servicing 30 hours
This course provides instruction in safe ground handling procedures and aircraft movement, tie-down and storage. Students will also identify aviation fuels and determine the proper fuel for a particular aircraft.

Hydraulics and Pneumatics 60 hours
This course provides instruction on the components and operation of aircraft hydraulic and pneumatic systems. Hands-on training will be provided in identifying and selecting hydraulic fluids and repairing hydraulic and pneumatic power systems components. Finally the student will inspect, check, service, troubleshoot and repair a complete hydraulic and pneumatic power system. Prerequisite: Students must have completed the General Program or have been authorized to attend this course by the Director/Assistant Director.

Instruments and Communication/Navigation Systems 37.5 hours
This course provides instruction in the components and operation of these two systems. Students will be introduced to inspecting, checking, troubleshooting, servicing and repairing electronic flight instrument systems and both mechanical and electrical heading, speed, altitude, temperature, pressure and position-indicating systems to include the use of built-in test equipment. Hands-on training will be provided in installing instruments and performing a static pressure system leak test. Students will also be introduced to inspecting, checking, troubleshooting, autopilot, servos and approach coupling systems. In addition instruction will include inspecting, checking and servicing electronic communication and navigation systems. This will include VHF passenger address interphones and static discharge devices, VOR, ILS, LORAN, radar beacon transponders, flight management computers and GPWS. Hands-on training will be provided in inspecting and repairing antenna and electronic equipment installations. Prerequisite: Students must have completed the General Program or have been authorized to attend this course by the Director/Assistant Director.

Instruments and Measurements for Electronics Technicians 15 hours
This course covers the theory and practical considerations of electronic measurements, including concepts of accuracy and precision. The construction, calibration and maintenance of test equipment and special circuits to facilitate measurement will be covered in detail. The concepts of measurement error, parallax error and circuit loading will be covered. Prerequisite: Electrical Safety for Electronics Technicians

Introduction to Collision Repair Technology 45 hours
In this course the student will cover tools and equipment, safety, hazardous material handling and storage. The student will be taught to identify safety and hazardous warning information for products used in the collision repair industry and the Right-To-Know Act. Students will also study the collision repair industry and the preparation of the vehicle for entering the repair facility.

Landing Gear and Position/Warning Systems 75 hours
This course provides instruction on various aircraft landing systems and their operation. Students will inspect, check, service and repair landing gear, retraction systems, shock struts, brakes, wheels, tires and steering systems. Students will also inspect, check and service landing gear position and warning systems, antiskid systems and other indicating and warning systems. Prerequisite: Students must have completed the General Program or have been authorized to attend this course by the Director/Assistant Director.
Nonmetallic Structural Repair Fabric and Finish 127.5 hours
In this course, students will identify types of wood structures and wood defects and will service and repair wood structures. They will identify various types of fabric; describe methods used in applying fabric; and describe the procedures for inspecting, testing, and repairing fabric and fiberglass. Students will also identify types of composite elements; inspect, test, and repair bonded structures; and install fasteners. In addition, students will describe various methods for working with plastics and will inspect, check, and repair an acrylic window, door, or an interior surface. Students will identify, select, and apply finishing materials and will also identify defects. Students must have completed the General program or have been authorized to attend this course by the Director/Assistant Director.

Powerplant Electrical Systems 67.5 hours
This course provides instruction in power-plant electrical installations and electrical power generating systems for both reciprocating and turbine engines. Students will install engine electrical wiring, controls, switches, indicators, and protective devices and check for proper operation of generators and alternators. Students will service these systems and repair system components. Prerequisite: Students must have completed the General Program or have been authorized to attend this course by the Director/Assistant Director.

Powerplant Instrumentation and Fire Protection 22.5 hours
This course provides instruction on the types and functions of turbine and reciprocation engine instruments, including pressure measuring, temperature measuring, mechanical measuring, and instrument marking and installation. Students will identify the components and describe the operation of the common methods used for fire detection and extinguishing in both piston and turbine application. Prerequisite: Student must have completed the general and airframe program or have been authorized to attend this course by the Director/Assistant Director.

Powerplant Wiring Procedures 30 hours
This course provides instruction in powerplant electrical wiring installations for both reciprocating and turbine engines. Students will route and secure wires in bundles or conduit and install the proper termination for given situations. Students will also service and repair wiring installations. Prerequisite: Students must have completed the General Program or have been authorized to attend this course by the Director/Assistant Director.

Mathematics (Aviation related majors) 30 hours
This course provides instruction in all of the mathematical computations required in the aviation maintenance curriculum. Students will first be given a basic math review. Students will solve problems involving ratios, proportions, percentages, areas, volumes and conversions. Power and roots and scientific notation will also be used. In addition, instruction in basic algebra operations, geometry and trigonometry will be provided.

Mechanical Fasteners and Terminals for Electronics Technicians 15 hours
This course covers in depth the many standards and uses of mechanical fasteners and electrical/electronic terminals used in constructing electronic circuits and devices. Special emphasis will be placed on nomenclature and specifications, print and schematic reading and mechanical construction techniques. Prerequisite: Soldering for Electronics Technicians

Electrical Power Generating Systems 150 hours
This course builds on the digital systems course, introducing microprocessors, memory systems, assembly language programming, and interfacing microprocessors with external circuits to control signal and power flow and sense input conditions. Digital to analog and analog to digital concepts will be taught and special emphasis will be placed on troubleshooting and repair techniques, safety and reliability. Prerequisite: Digital Systems for Electronics Technicians

Materials and Processes, NDI, Precision Measuring 75 hours
This course provides instruction in the relative strengths and advantages of common aircraft materials and the identification systems used for aluminum and steel. Students will become familiarized with the heat treating process. Students will identify and select common nonmetallic materials and learn proper use and handling procedures. Students will learn to identify appropriate NDI methods and perform various types of inspections including dye penetrant, magnetic particle, eddy current, and ultrasonic inspections. They will also receive instruction in the identification, selection and installation of common aircraft hardware. Students will select and install solid shank rivets to airworthy standards. Students will also learn to perform precision measuring.

Mechanical Fasteners and Terminals for Electronics Technicians 15 hours
This course covers in depth the many standards and uses of mechanical fasteners and electrical/electronic terminals used in constructing electronic circuits and devices. Special emphasis will be placed on nomenclature and specifications, print and schematic reading and mechanical construction techniques. Prerequisite: Soldering for Electronics Technicians

Nonmetallic Structural Repair Fabric and Finish 127.5 hours
In this course, students will identify types of wood structures and wood defects and will service and repair wood structures. They will identify various types of fabric; describe methods used in applying fabric; and describe the procedures for inspecting, testing, and repairing fabric and fiberglass. Students will also identify types of composite elements; inspect, test, and repair bonded structures; and install fasteners. In addition, students will describe various methods for working with plastics and will inspect, check, and repair an acrylic window, door, or an interior surface. Students will identify, select, and apply finishing materials and will also identify defects. Students must have completed the General program or have been authorized to attend this course by the Director/Assistant Director.

Powerplant Electrical Systems 67.5 hours
This course provides instruction in power-plant electrical installations and electrical power generating systems for both reciprocating and turbine engines. Students will install engine electrical wiring, controls, switches, indicators, and protective devices and check for proper operation of generators and alternators. Students will service these systems and repair system components. Prerequisite: Students must have completed the General Program or have been authorized to attend this course by the Director/Assistant Director.

Powerplant Instrumentation and Fire Protection 22.5 hours
This course provides instruction on the types and functions of turbine and reciprocation engine instruments, including pressure measuring, temperature measuring, mechanical measuring, and instrument marking and installation. Students will identify the components and describe the operation of the common methods used for fire detection and extinguishing in both piston and turbine application. Prerequisite: Student must have completed the general and airframe program or have been authorized to attend this course by the Director/Assistant Director.

Powerplant Wiring Procedures 30 hours
This course provides instruction in powerplant electrical wiring installations for both reciprocating and turbine engines. Students will route and secure wires in bundles or conduit and install the proper termination for given situations. Students will also service and repair wiring installations. Prerequisite: Students must have completed the General Program or have been authorized to attend this course by the Director/Assistant Director.

Mechanical Fasteners and Terminals for Electronics Technicians 15 hours
This course covers in depth the many standards and uses of mechanical fasteners and electrical/electronic terminals used in constructing electronic circuits and devices. Special emphasis will be placed on nomenclature and specifications, print and schematic reading and mechanical construction techniques. Prerequisite: Soldering for Electronics Technicians

Electrical Power Generating Systems 150 hours
This course builds on the digital systems course, introducing microprocessors, memory systems, assembly language programming, and interfacing microprocessors with external circuits to control signal and power flow and sense input conditions. Digital to analog and analog to digital concepts will be taught and special emphasis will be placed on troubleshooting and repair techniques, safety and reliability. Prerequisite: Digital Systems for Electronics Technicians

Nonmetallic Structural Repair Fabric and Finish 127.5 hours
In this course, students will identify types of wood structures and wood defects and will service and repair wood structures. They will identify various types of fabric; describe methods used in applying fabric; and describe the procedures for inspecting, testing, and repairing fabric and fiberglass. Students will also identify types of composite elements; inspect, test, and repair bonded structures; and install fasteners. In addition, students will describe various methods for working with plastics and will inspect, check, and repair an acrylic window, door, or an interior surface. Students will identify, select, and apply finishing materials and will also identify defects. Students must have completed the General program or have been authorized to attend this course by the Director/Assistant Director.

Powerplant Electrical Systems 67.5 hours
This course provides instruction in power-plant electrical installations and electrical power generating systems for both reciprocating and turbine engines. Students will install engine electrical wiring, controls, switches, indicators, and protective devices and check for proper operation of generators and alternators. Students will service these systems and repair system components. Prerequisite: Students must have completed the General Program or have been authorized to attend this course by the Director/Assistant Director.

Powerplant Instrumentation and Fire Protection 22.5 hours
This course provides instruction on the types and functions of turbine and reciprocation engine instruments, including pressure measuring, temperature measuring, mechanical measuring, and instrument marking and installation. Students will identify the components and describe the operation of the common methods used for fire detection and extinguishing in both piston and turbine application. Prerequisite: Student must have completed the general and airframe program or have been authorized to attend this course by the Director/Assistant Director.

Powerplant Wiring Procedures 30 hours
This course provides instruction in powerplant electrical wiring installations for both reciprocating and turbine engines. Students will route and secure wires in bundles or conduit and install the proper termination for given situations. Students will also service and repair wiring installations. Prerequisite: Students must have completed the General Program or have been authorized to attend this course by the Director/Assistant Director.

Mechanical Fasteners and Terminals for Electronics Technicians 15 hours
This course covers in depth the many standards and uses of mechanical fasteners and electrical/electronic terminals used in constructing electronic circuits and devices. Special emphasis will be placed on nomenclature and specifications, print and schematic reading and mechanical construction techniques. Prerequisite: Soldering for Electronics Technicians

Electrical Power Generating Systems 150 hours
This course builds on the digital systems course, introducing microprocessors, memory systems, assembly language programming, and interfacing microprocessors with external circuits to control signal and power flow and sense input conditions. Digital to analog and analog to digital concepts will be taught and special emphasis will be placed on troubleshooting and repair techniques, safety and reliability. Prerequisite: Digital Systems for Electronics Technicians

Nonmetallic Structural Repair Fabric and Finish 127.5 hours
In this course, students will identify types of wood structures and wood defects and will service and repair wood structures. They will identify various types of fabric; describe methods used in applying fabric; and describe the procedures for inspecting, testing, and repairing fabric and fiberglass. Students will also identify types of composite elements; inspect, test, and repair bonded structures; and install fasteners. In addition, students will describe various methods for working with plastics and will inspect, check, and repair an acrylic window, door, or an interior surface. Students will identify, select, and apply finishing materials and will also identify defects. Students must have completed the General program or have been authorized to attend this course by the Director/Assistant Director.
Reciprocating Induction, Exhaust, Cool, Lube and Start Systems 45 hours
This course provides instruction in the components and operation of ice and rain control systems as well as intake, exhaust, cooling, lubrication and starting systems commonly found on reciprocating engines. Students will service and repair various components of these systems and service both wet and dry sump lubrication systems. Prerequisite: Student must have completed the general and airframe program or have been authorized to attend this course by the Director/Assistant Director.

Refinish Application 145 hours
Spray gun operation will be covered in great detail and applied to different products used in refinishing. Students will learn about corrosion protection products and how to mix and apply them, which will include etching primers, primer surfacer and sealing materials. Seam sealers and chip resistant coatings will be covered to demonstrate their role and application process. Students will learn about topcoats, like basecoat/clear coat products and their application techniques. Included in this course is instruction to determine the cause and corrective action for finish failures.

Refinish Blending & Painting Defects 60 hours
In this course the students learn masking techniques specific to the blending. Students learn how to apply the refinishing material to perform an undetectable repair. Included in this course will be instruction on how to determine the cause and corrective action for refinishing defects and failures.

Refinish Color Adjustment 75 hours
In this course the students learn to make a spray-out panel and how to evaluate the color match. Techniques and strategies for adjusting the color for an acceptable color match are taught. Students learn techniques to help adjust high metallic/mica colors as well as tri-coat colors.

Refinish Preparation 130 hours
In this course the students learn how to prepare surfaces for the refinishing process. The student covers topics about sandpaper and learn techniques to choose the proper grit and how to operate sanding equipment. This course will provide instruction in masking techniques and products used to mask and protect areas not in the refinishing operation. The students learn proper techniques for block and finish sanding prior to topcoat application. Students learn to apply proper substrate cleaning before the application of refinishing products.

Semiconductor Circuits for Electronics Technicians 150 hours
This course covers the many active circuits that use semiconductors to measure, amplify, control, receive and transmit electronic signals. Specialized circuits such as bridges, classes of amplifiers, oscillators, active filters and power control circuitry will be covered. Much of the course will focus on hands-on construction, testing and troubleshooting circuits. Prerequisite: Semiconductor Devices for Electronics Technicians

Semiconductor Devices for Electronics Technicians 90 hours
This course covers two-, three- and four-layer semiconductor devices commonly used in electronic circuits, including diodes, transistors, bi-polar as well as FET technologies, and specialized devices used in measurement and power control circuits. Much of the course will focus on hands-on construction, testing and troubleshooting circuits for the purpose of examining the operation of semiconductor devices. Prerequisite: AC Circuits for Electronics Technicians

Sheet Metal Structural Repair 120 hours
This course provides hands-on training in the forming, laying out, bending and installation of sheet metal. Students will identify structures, stresses and tools associated with sheet metal. Students will select, install and remove special fasteners; install conventional rivets; and inspect and repair sheet metal structures. Prerequisite: Students must have completed the General Program or have been authorized to attend this course by the Director/Assistant Director.

Soldering for Electronics Technicians 15 hours
This course covers the theory and essentials of preparing surfaces and leads for soldering, preparation and adjustment of soldering equipment, and procedures for through-hole, surface mount, and lead free soldering for reliability. Mil-Spec procedures will be covered briefly. Prerequisite: Electrical Safety for Electronics Technicians

Solid State Circuits 37.5 hours
This course provides instruction in the theory and principles of electron control devices. Students will compute and observe the effects of inductance, capacitance and impedance in solid-state circuitry. Students will also perform circuit analysis using electrical diagrams and measuring instruments, use various electronic control devices, and conduct basic troubleshooting.

Turbine Engine Inspection, Repair, Alteration and Troubleshooting 60 hours
This course provides instruction in the procedures and inspection methods used during the repair of turbine engine. Students will service and repair a turbine engine and perform authorized alterations as required. Prerequisite: Student must have completed the general and airframe program or have been authorized to attend this course by the Director/Assistant Director.

Turbine Engine Removal, Overhaul and Installation 90 hours
This course provides instruction in the procedures and inspection methods used during the overhaul of turbine engines and the instrumentation used to monitor engine conditions. Students will remove, overhaul, and reinstall a turbine engine and perform a conformity and airworthiness inspection on the engine. Prerequisite: Student must have completed the general and airframe program or have been authorized to attend this course by the Director/Assistant Director.

Turbine Fuels and Metering 37.5 hours
This course provides instruction in turbine engine fuels, fuel controls, fuel pumps, filters and other system components. The student will inspect, check, service, trouble-shoot and repair turbine engine fuel metering systems and their system components. Prerequisite: Student must have completed the general and airframe program or have been authorized to attend this course by the Director/Assistant Director.

Turbine Induction, Exhaust, Lube, Start and Ignition Systems 45 hours
This course provides instruction on the components and operation of ice and rain control systems as well as intake, exhaust, cooling, lubrication, ignition and starting systems commonly found on turbine engines. Students will service and repair various components of these systems and service both wet and dry sump lubrication systems. Prerequisite: Student must have completed the general and airframe program or have been authorized to attend this course by the Director/Assistant Director.

Weight and Balance 37.5 hours
This course provides instruction in the importance of weight and balance, the required calculations for weight and balance checks, equipment changes, extreme loading checks and the addition of ballast. Students will weigh aircraft, complete a weight and balance check, and record data.

Workforce Staging 30 hours
This course is designed to be delivered as an integrated component within the courses taken by the individual student. Course is designed for the development of leadership, personal development and employability skills attainment.
